# Glossary

| Term           | Stand For                                             | Definition                                                                                |
|----------------|-------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>(AB)</b>    | Account Balance                                       | Used for associating assertions                                                           |
| <b>(COT)</b>   | Classes of Transactions                               | Used for associating assertions                                                           |
| <b>(D)</b>     | Disclosures                                           | Used for associating assertions                                                           |
| <b>AAM</b>     | Audit Approach Manual                                 | Deloitte's internal manual for performing an audit                                        |
| <b>ABCOTD</b>  | Account Balance Classes of Transactions & Disclosures | Account balances in the Financial Statements                                              |
| <b>AFDA</b>    | Allowance For Doubtful Accounts                       | Audit procedure                                                                           |
| <b>AJE</b>     | Adjusting Journal Entry                               | An entry to record any unrecognized income or expenses for a period                       |
| <b>AP</b>      | Accounts Payable                                      | Audit procedure                                                                           |
| <b>AR</b>      | Account Receivables                                   | Audit procedure                                                                           |
| <b>AS/2</b>    | Audit System 2                                        | Tool used before EMS, still used in some countries, also within the VSA environment       |
| <b>BP</b>      | Business Process                                      | List of Client's process to be provided to the Auditor                                    |
| <b>CAR</b>     | Concluding analytical procedures                      | Risk assessment procedure                                                                 |
| <b>CAS</b>     | Cash and cash equivalents                             | Audit procedure                                                                           |
| <b>COS</b>     | Cost of Sales                                         | Audit procedure                                                                           |
| <b>CP</b>      | Current Period                                        | Period used for audit                                                                     |
| <b>CTT</b>     | Clearly Trivial Threshold                             | An threshold amount used to ignore lower misstatements                                    |
| <b>CY</b>      | Current Year                                          | Year used for audit                                                                       |
| <b>D&amp;I</b> | Design and Implementation                             | Risk assessment procedures on the design and implementation of relevant internal controls |
| <b>DEB</b>     | Debt                                                  | Audit procedure                                                                           |
| <b>DFR</b>     | Deferred Revenue                                      | Audit procedure                                                                           |
| <b>DIS</b>     | Disclosures                                           | Audit procedure                                                                           |
| <b>EMS</b>     | Engagement Management System                          | Deloitte's current audit tool                                                             |
| <b>EQ</b>      | Equity account balances                               | Audit procedure                                                                           |
| <b>EQCR</b>    | Engagement Quality Control Review                     | Quality review by a Partner not involved in the audit                                     |
| <b>FS</b>      | Financial Statements                                  | Used for associating assertions                                                           |
| <b>FSL</b>     | Financial statement level                             | Audit procedure                                                                           |
| <b>FX</b>      | Forex gains/losses                                    | Audit procedure                                                                           |

|                 |                                |                                                                                |
|-----------------|--------------------------------|--------------------------------------------------------------------------------|
| <b>GITC</b>     | General IT Controls            | Controls related to the IT systems used in preparing the Financial Statements  |
| <b>GCT</b>      | General Common Tool            | Tool used for audit procedure                                                  |

| <b>VVSA</b> | Very Very Small Audits            | Subset of VSA's, often less than 50 hours, can be as low as 5 hours |
| <b>WP</b>   | Working Paper                     | Place to document audit work                                        |

# Overview

- **Deloitte** is one of the "Big Four" accounting organizations and the largest professional services network in the world by revenue and number of professionals
- Avenir helps small and medium sized accounting firms to provide a better, technology enabled and more efficient engagement experience for their clients.
- There are 3 applications which is implemented in Vietnam so far include:
  - Basic Avenir application: basic application for user to manage task
  - Pro version Avenir application
  - VSA (very small auditing) application: to be described in this document
- VSA Project:
  - The project to build an application to be used in auditing
  - From data which is extracting from the company, based on the predefined process, user will extract the information and finally giving the conclusion if the company is in good shape or not

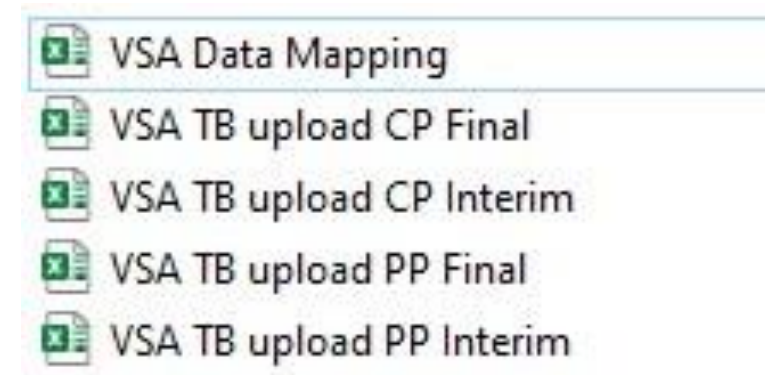

# VSA Application Workflow

- Idea:

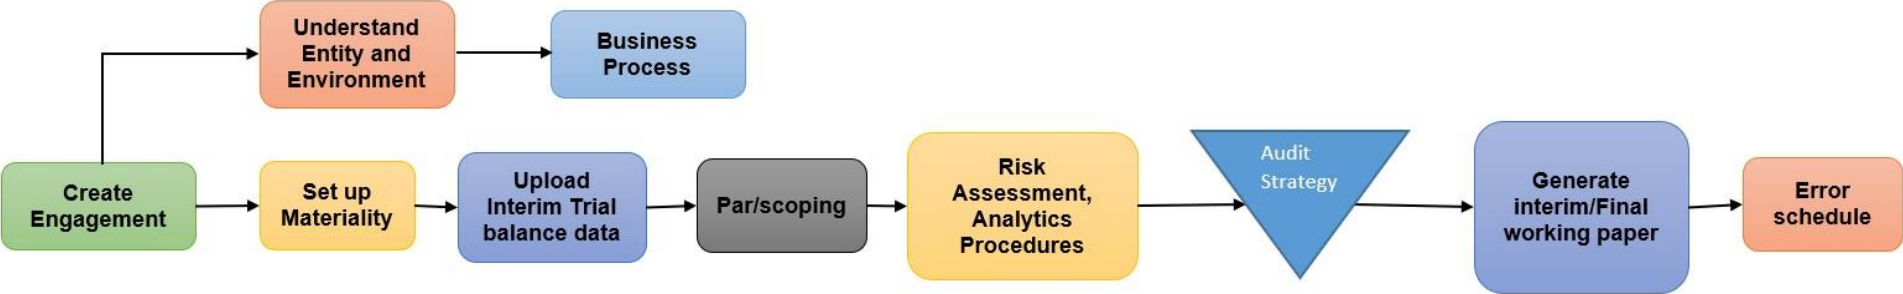

- Auditor is the one who will perform audit on the available data of the client. From the data provided by client, user will perform all steps and finally give the conclusion if the client organization is on the good shapes or not.
- During auditing: Auditor will investigate the company and identify correct process to be used for auditing the client organization.
- Base on the identify process, user perform the steps, input value and finally generate working papers, this working paper will be used in auditing and identify the issue

- Note:

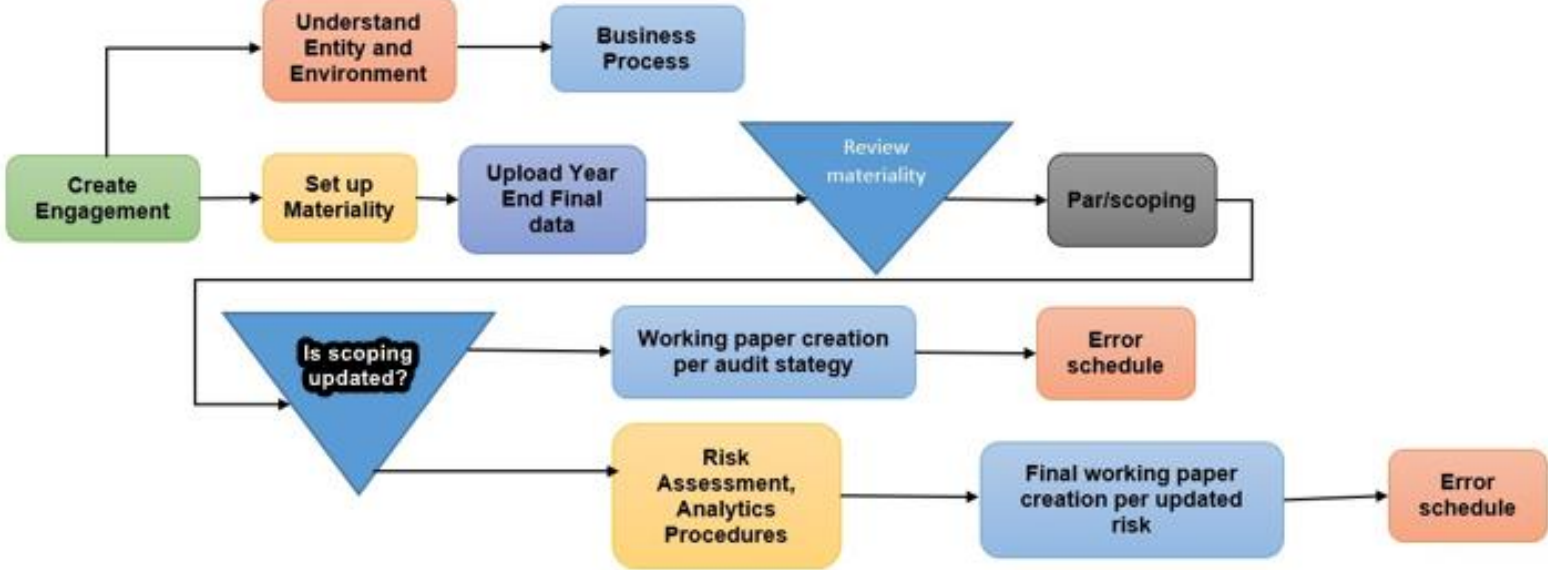

- Currently on this version, we use 5 data files as beside
- The CP Interim, PP Interim, PP Final will be used to perform Interim flow
- At any point, when user upload CP Final data, user will work on Final flow
- Mapping data file for mapping the account to the correct content area and ABCOTD

# Interim data workflow

# Final data workflow

# Example for a Smoke Test Main Flow

#### Tailoring questions

**CAS.TQ01** Are any of the material cash balances denominated in a foreign currency?

- ☒ Yes  
☐ No

**CAS.TQ02** Does the entity have material cash on hand balances?

- ☒ Yes  
☐ No

**CAS.TQ03** Does the entity have material interest income from cash and cash equivalents?

- ☒ Yes  
☐ No

**CAS.TQ04** Are there any material related party transactions?

- ☒ Yes  
☐ No

**CAS.TQ05** The standard content for this content area does not contain standard ROMMs for the following ABCOTD/assertions: Interest from cash or cash equivalent - Completeness, Classification Based on the understanding of the entity and its environment and considering what can go wrong for the ABCOTD(s), are there ROMMs applicable for any the below ABCOTDs/Assertions? If yes, please create the necessary custom ROMM(s), link the applicable assertion(s) to the custom ROMM(s), provide appropriate risk classification(s), and plan to perform further audit procedures to address the custom ROMM(s). The standard content has been created to address common ROMMs for a 'typical' very small audit. The standard content may therefore not be exhaustive, and, as such, it is important to apply professional judgement to the facts and circumstances of the engagement to determine if custom content is needed.

- ☒ Yes  
☐ No

# Engagement Creation

- What is engagement?
  - An engagement or an audit engagement is an arrangement that an auditor has with a client to perform an audit of the client's accounting records and financial statements.
  - Note: Currently, user should have Deloitte account to login Azure environment before process to the next level. The account can be requested from Leader for working.

# Engagement Creation

- For the first time, after user login to the application there would be no engagement as beside image
- User now process to create engagement by clicking on “Create Engagement” button
- Note:
  - Currently, after creating, engagement cannot be deleted manually by auditor
  - One engagement can belong to one Entity
  - One Entity can be audited with multiple engagement

- After pressing “Create Engagement” button, follow step by step below to create engagement:

To begin, select a Cloud Cabinet below:

Independence confirmation

You must confirm your personal independence with respect to this Client and its Affiliates prior to accessing the engagement file. Your personal independence can be impacted by the business activities, employment relationships and financial holdings of Immediate Family Members and Close Family Members. Please review your member firm independence policy and guidance for additional information regarding personal independence.

I have reviewed and evaluated my personal independence, that of my Immediate Family Members, and where applicable that of my Close Family Members, and confirm that I am independent of the Client and its Affiliates including with respect to any:

• Financial Interests (including those in retirement plans or those held in trust/controlled for the benefit of others)

• Employment Relationships

• Business Relationship (including with people in senior management or others in decision making roles such as Officers, Directors, Significant Shareholders)

By clicking "Confirm," I have considered my personal independence, including that of my Immediate Family Members and Close Family Members as applicable, and based on the representations above confirm that I am indeoendent with respect to this Client and its Affiliates.

Cancel

Confirm

- After engagement is activated at first time, when user try to enter the engagement and pop-up will be display as below image
- This pop-up is independence confirmation
- To enter the engagement, user have to go through the conifmraitonpop-u pand then pressing Confirm button
- This apply for all user who is invited to the engagement
- Note:
  - The independence message is only displayed first time when user open the engagement
  - The independence message display for all user in this engagement
  - After confirm, and entry will be stored in database to indicate that user have confirmed to work on this engagement

## Working paper tab

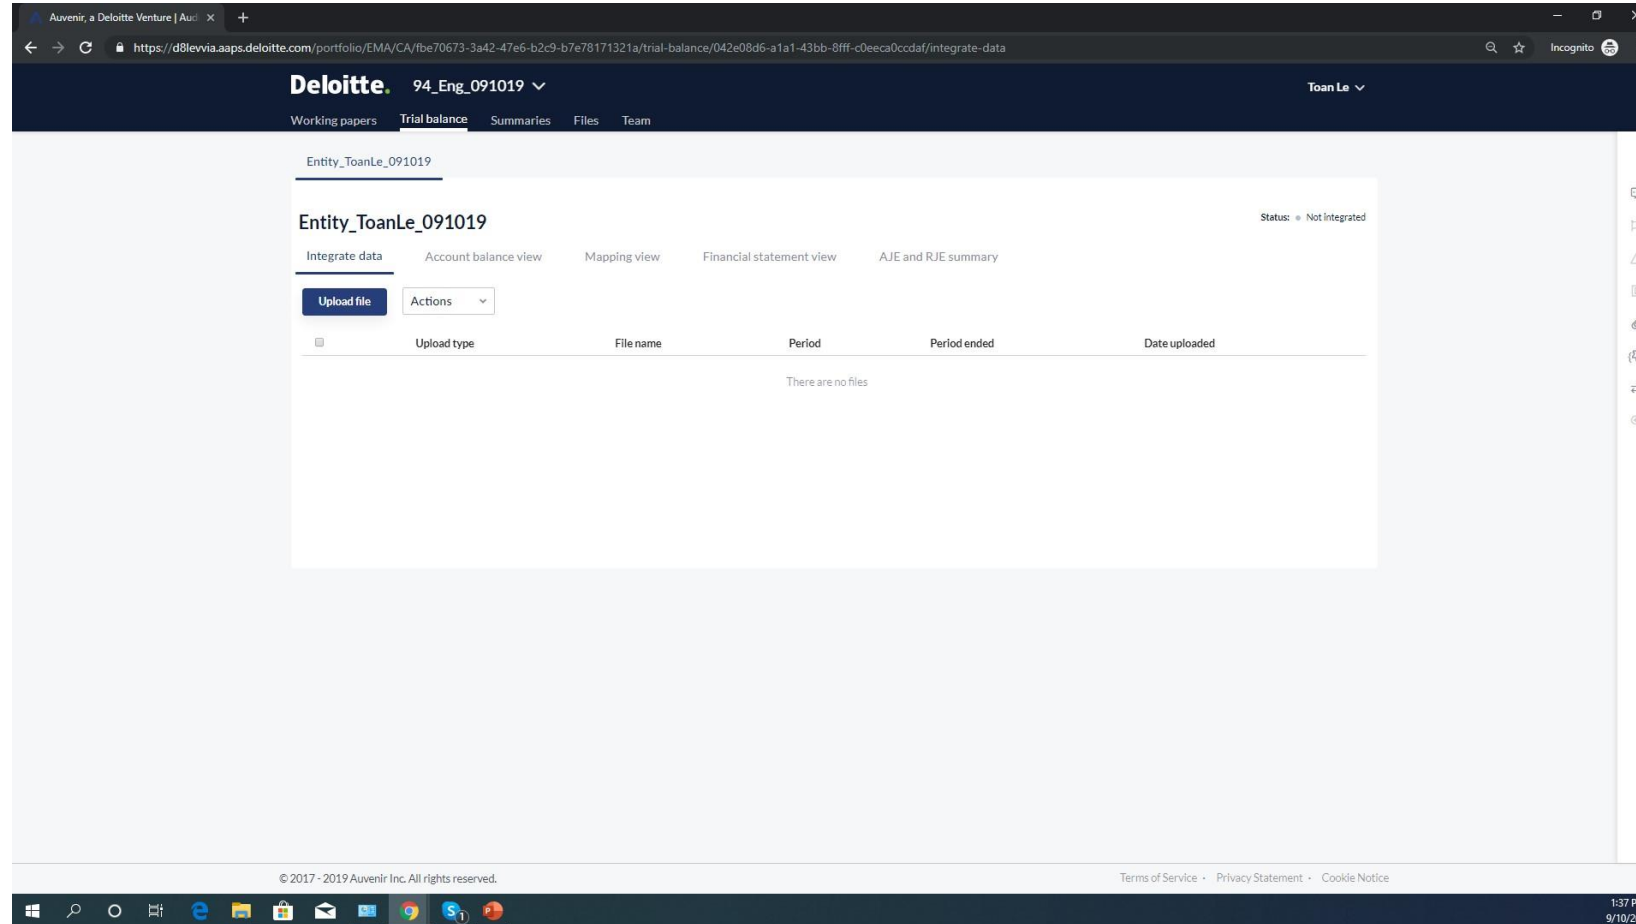

- Contain all phases, sub-phases and working papers which is used for auditing
- User can check some summary information of working paper
- User also can perform sign-off via mark as prepared/ mark as review
- All other function should also work correctly

The screenshot displays the 'Working papers' tab in a Deloitte application. The interface includes a search bar, a 'Create new' button, and a table of working papers. The table has columns for 'ID and name', 'Prepared by', 'Reviewed by', 'Review notes' (with sub-columns 'Open', 'Cleared', 'Closed'), 'Open flags', 'Files', and 'Comments'. The working papers are organized into folders: Planning, 11000 Engagement Risks and Acceptance, 12000 Understanding, 13000 Engagement Planning Activities, and 13200 Risk assessment analytics and visualizations template. Each folder contains a list of specific working papers with their respective IDs and names.

| ID and name                                                           | Prepared by | Reviewed by | Review notes | Open flags | Files  | Comments |

| 13200.02 Risk assessment analytics and visualizations template        | -           | -           | 0            | 0          | 0      | 0 0 0    |

## Trial balance tab

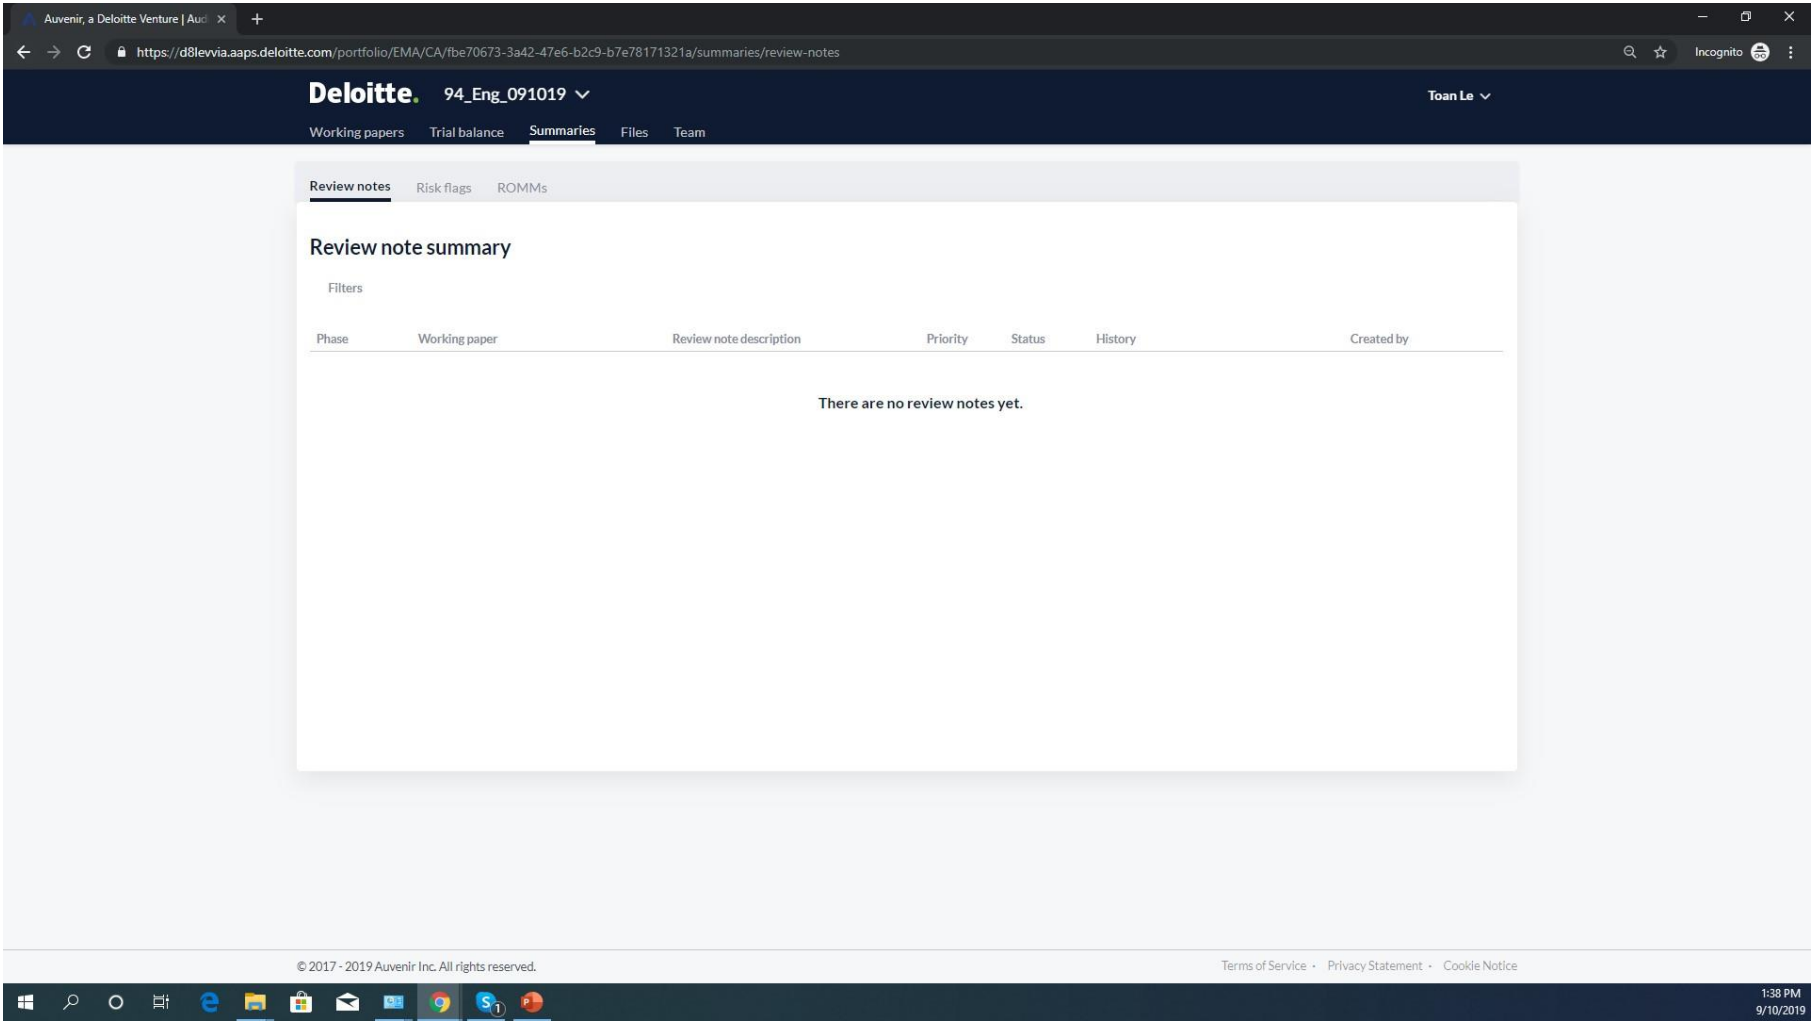

- This tab will be used for **uploading data** and **managing all function related with data** before processing to other steps

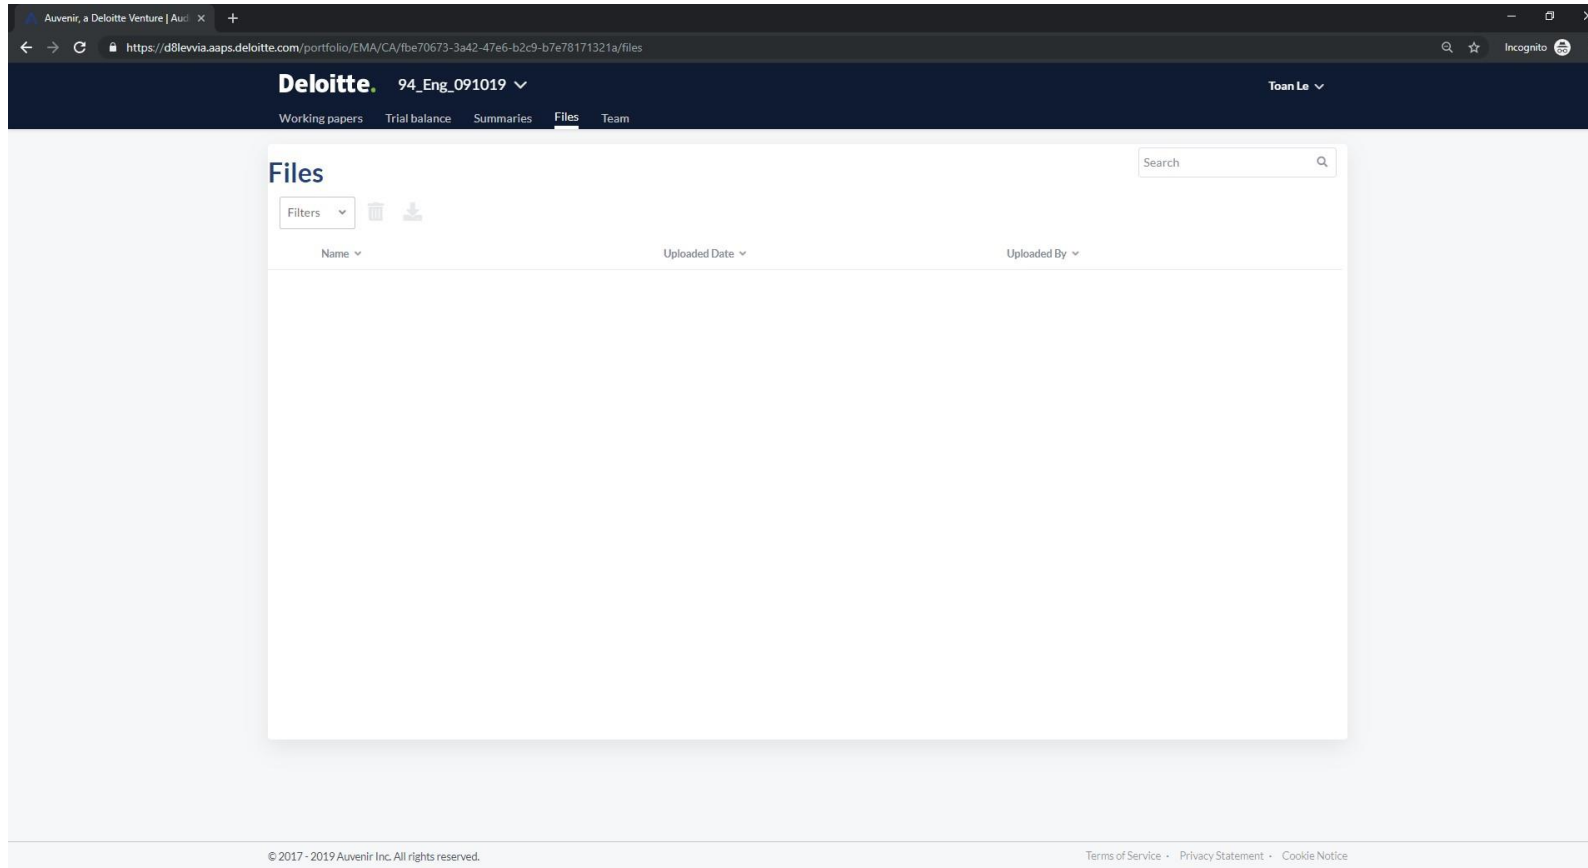

# Summary tab

- Summary all information in the engagement include Review Note, Risk flag, ROMMs

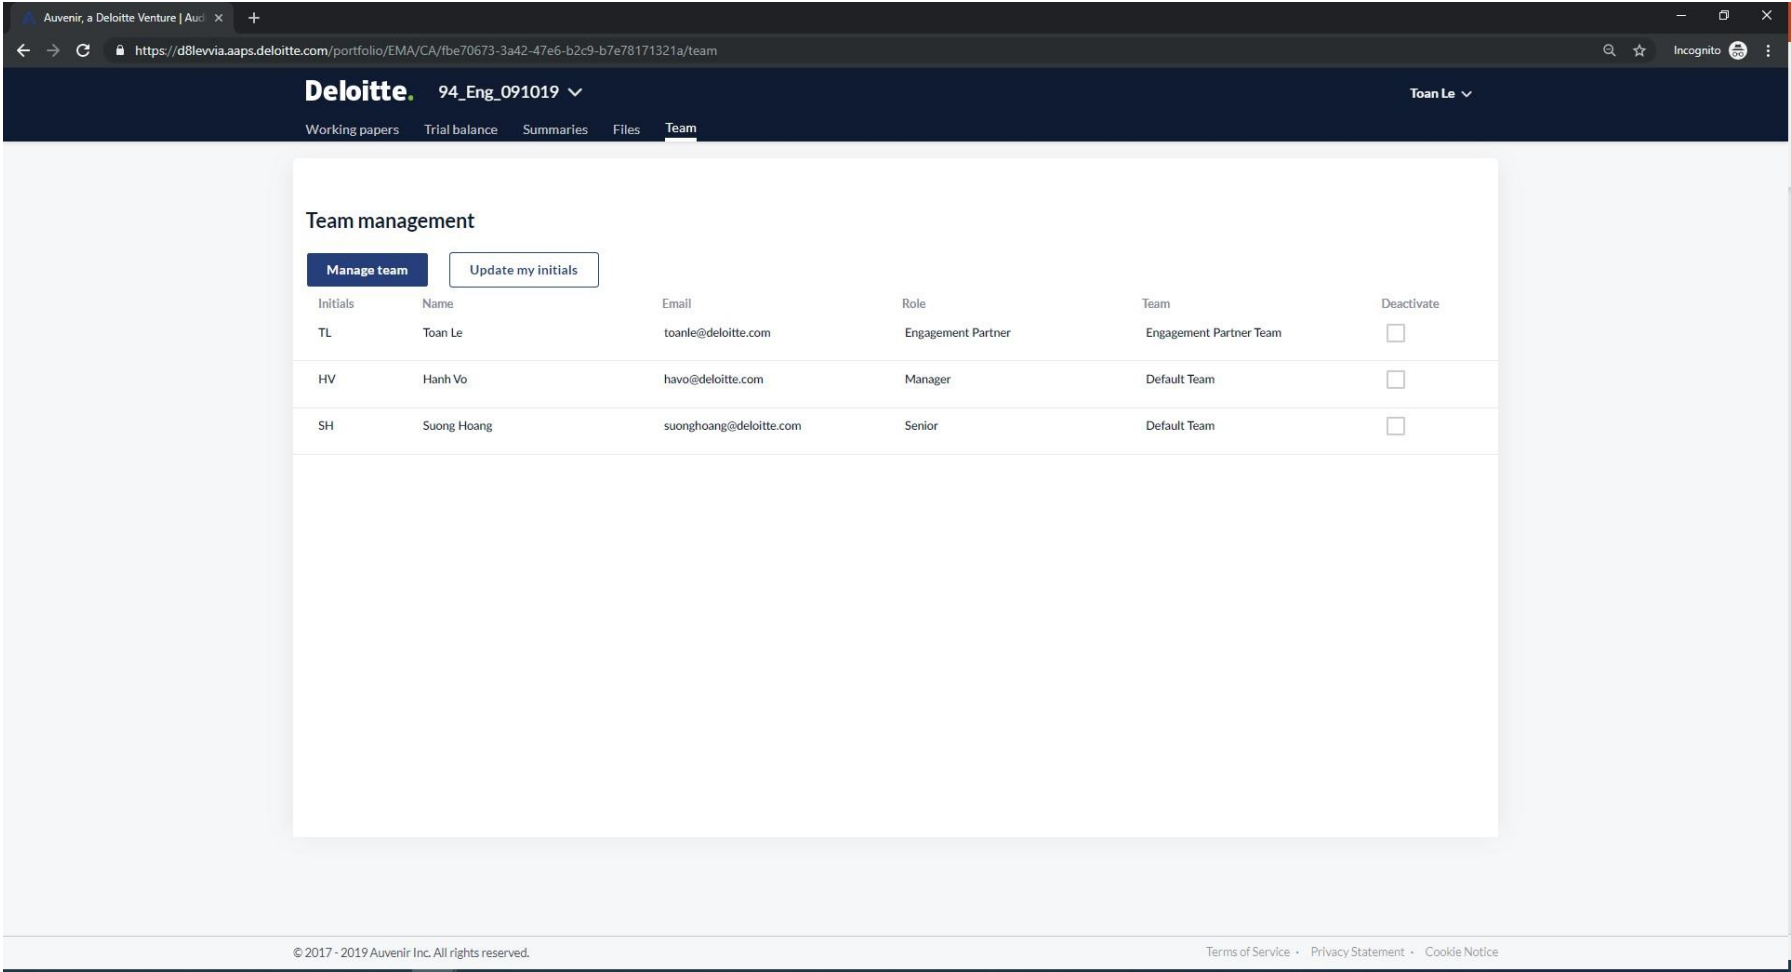

# Tab File

- The idea of tab file is to managing all files that user uploaded to the engagement

# Tab team

- Manage team members in the engagement. User can add or remove team. Or can update the initials name which is used for **sign-off function**

# Materiality

- Materiality is an assessment made by an auditor of the amount of tolerable misstatement of a client's financial statements in relationship to the amount of assessed risk assumed, and the perceived user of the report
- The determination of materiality, performance materiality, lower levels of materiality and their performance materiality for certain ABCoTDs (as needed), and the clearly trivial threshold (CTT) are complex matters requiring professional judgment and careful consideration of the facts for each entity. The determination of materiality is not intended to be a mechanical exercise; rather, it is one in which information is gathered and assessed alongside the applicable auditing guidance to establish an amount appropriate in the circumstances

# Materiality setup

- In this application, Materiality value is the significant value which is set by auditor and to be used during auditing

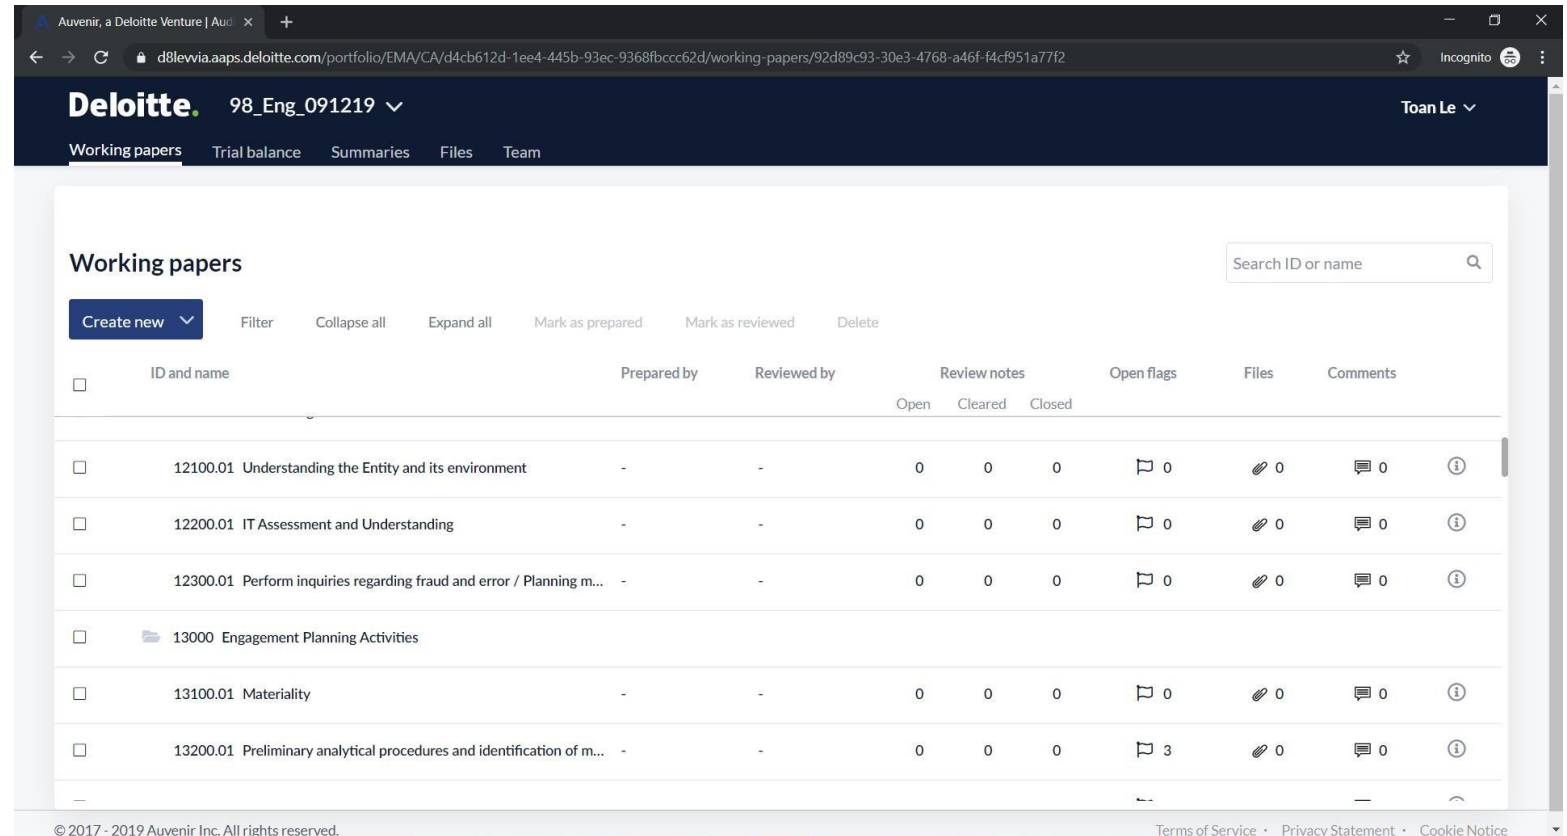

- Note:

- To set materiality value navigate to working paper tab, open the Materiality working paper

- This should always be **done before uploading data to the engagement**

- Below values should be setup: (refer to Step 3 in [Example for a Smoke Test Main Flow](#))

- Materiality
- Performance materiality
- CTT
- ABCOTD Materiality for the ABCOTD to audit

The screenshot shows the Deloitte working papers interface. The top navigation bar includes the Deloitte logo, the engagement ID '98\_Eng\_091219', and the user 'Toan Le'. The main section is titled 'Working papers' and contains a table with the following columns: ID and name, Prepared by, Reviewed by, Review notes (Open, Cleared, Closed), Open flags, Files, and Comments. The table lists several working papers, including '12100.01 Understanding the Entity and its environment', '12200.01 IT Assessment and Understanding', '12300.01 Perform inquiries regarding fraud and error / Planning m...', '13000 Engagement Planning Activities', '13100.01 Materiality', and '13200.01 Preliminary analytical procedures and identification of m...'. The '13200.01' row shows 3 open flags.

# Trial Balance Data uploading

- TB feature will allow the user to upload predefined excel files that will contain Primary TB amounts and the mapping to Note/FS lines, Sub-classes, Classes. Each one of Note lines will be mapped to VSA predefined ABCOTD that is mapped to a content area. Every TB detail account will be mapped → Note line, Note line → FS line, FS line → FS sub class, FS sub class → Class ✓ Every Note line will be mapped to predefined list of ABCOTDs
- The **connection** between **ABCOTDs** and **content areas** will be **pulled from Ink** and **stored in Avenir**
- To be used for uploading the excel data file and display all account and mapping information for that account
- Integrate data tab: display the uploaded file

- Account balance view: accounting data display with the amount for each account
- Mapping view: Mapping view for accounting data. Same as mapping file
- Financial statement view: display account with parent relation

|                             | ID | Account name |
|-----------------------------|----|--------------|
| There is no data integrated |    |              |

- AJE and RJE: journal entry to be explain in final data flow
- On integrate tab, when user clicking on Upload file beside pop-up display and allow user to upload data
- Trial balance amounts: allow user uploading trial balance data.
- Trial balance mapping: upload mapping file

- **Period selection:** chose data file type to upload. This option **only available when select trial balance amounts.** There are four options:

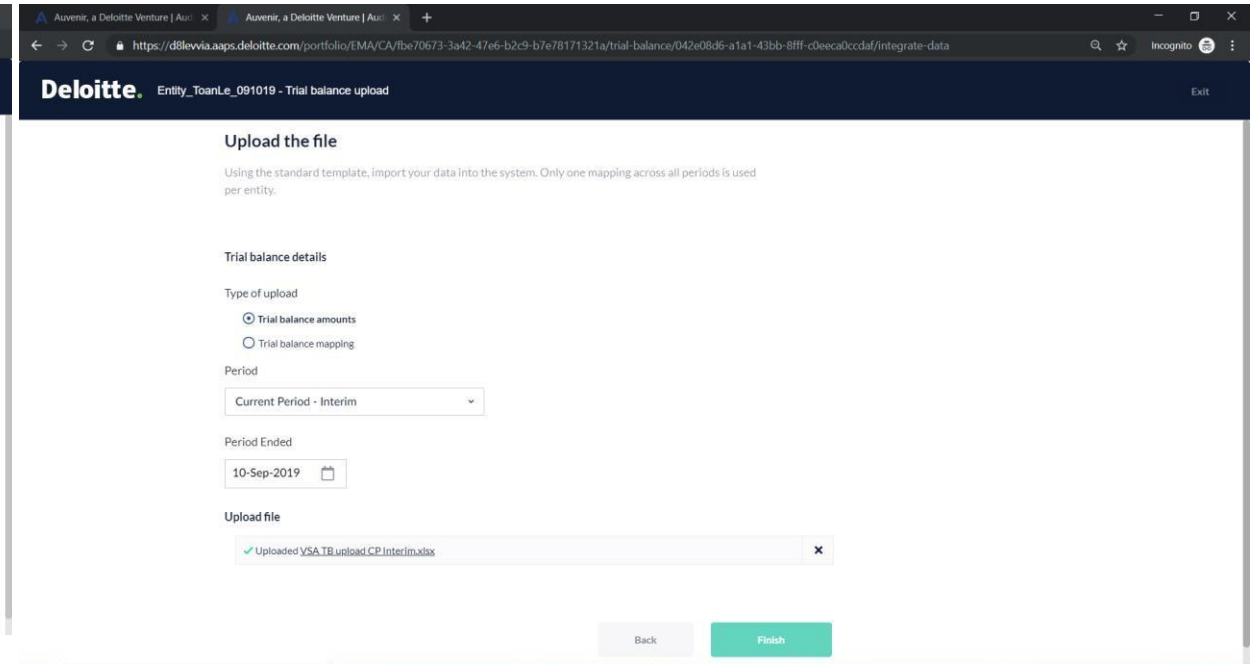

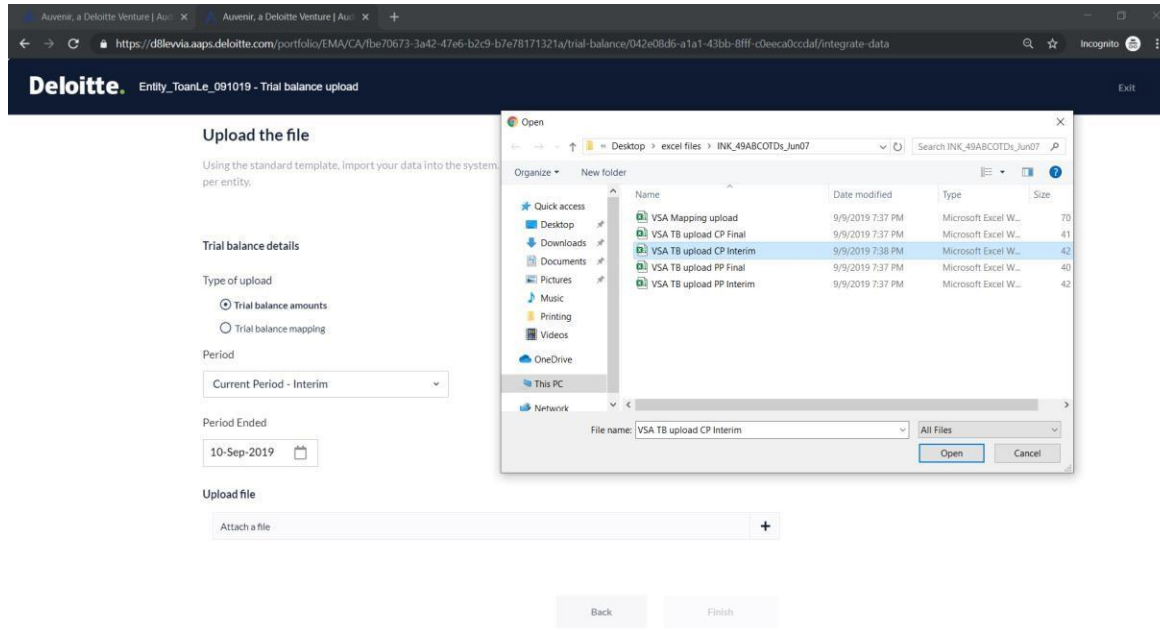

- Current Period – Interim
- Current Period – Final
- Prior Period – Interim
- Prior Period – Final

- Period Ended: Select the date and time of the file

- Upload file button

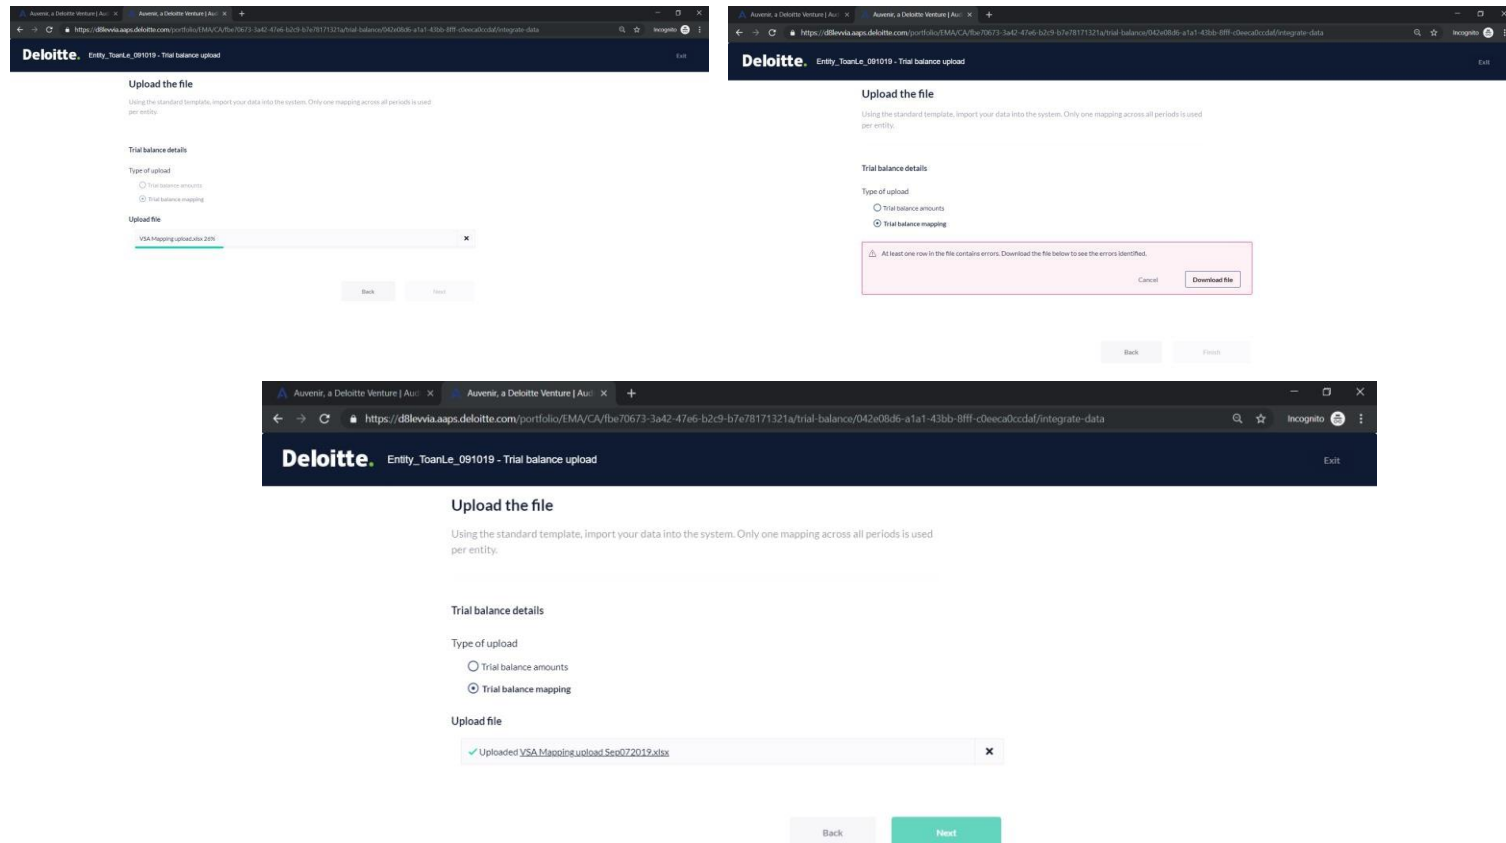

The screenshot shows a web browser window with the Deloitte logo and the title "Entity\_ToanLe\_091019 - Trial balance upload". The page content includes a header "Upload the file" with a sub-header "Using the standard template, import your data into the system. Only one mapping across all periods is used per entity." Below this, there is a section "Trial balance details" with a "Type of upload" section containing two radio buttons: "Trial balance amounts" (selected) and "Trial balance mapping". There is also a "Period" dropdown menu with the text "Select a period" and a "Period Ended" date picker showing "10-Sep-2019". At the bottom, there is an "Upload file" section with a text input field "Attach a file" and a plus sign button. Navigation buttons "Back" and "Next" are at the bottom right.

- Upload data to engagement

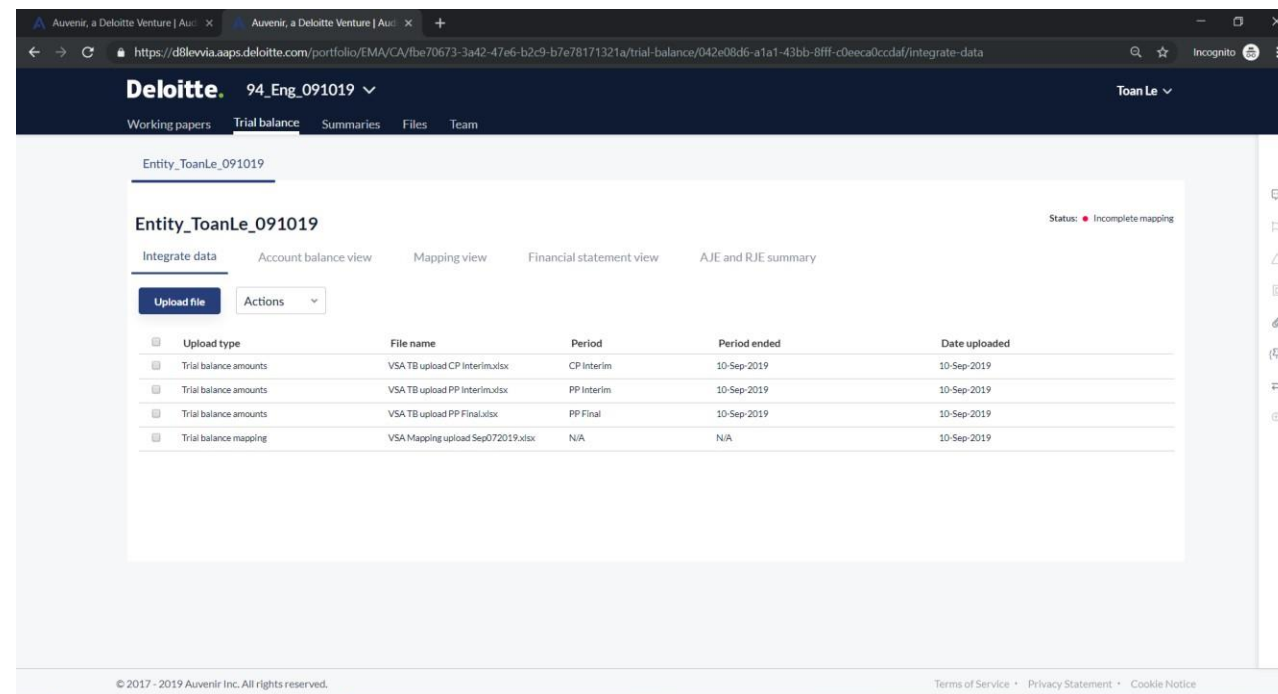

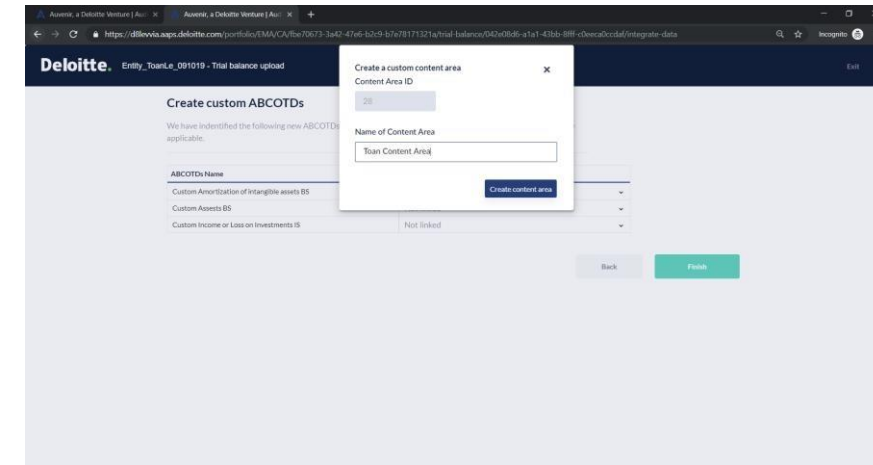

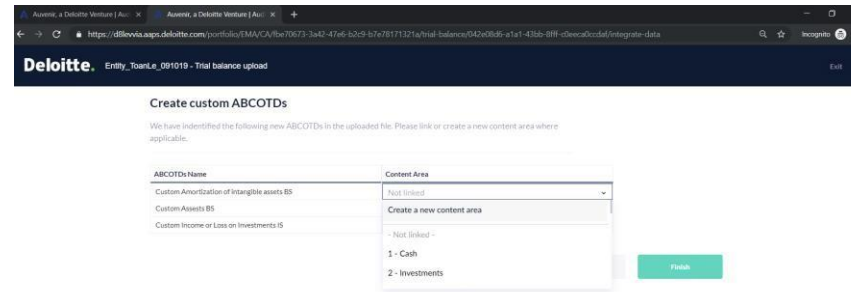

## Note:

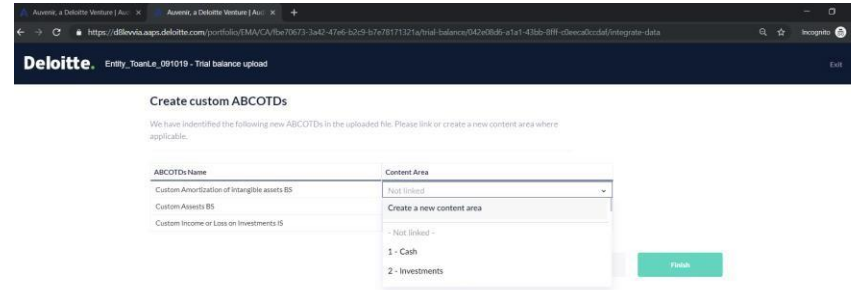

- Normally, the **mapping will be failed when INK data return new ABCOTD.** Please check and update the ABCOTD in mapping file and upload again
- During uploading, if there is any issue, the error will display and allow user to download the file and correct it

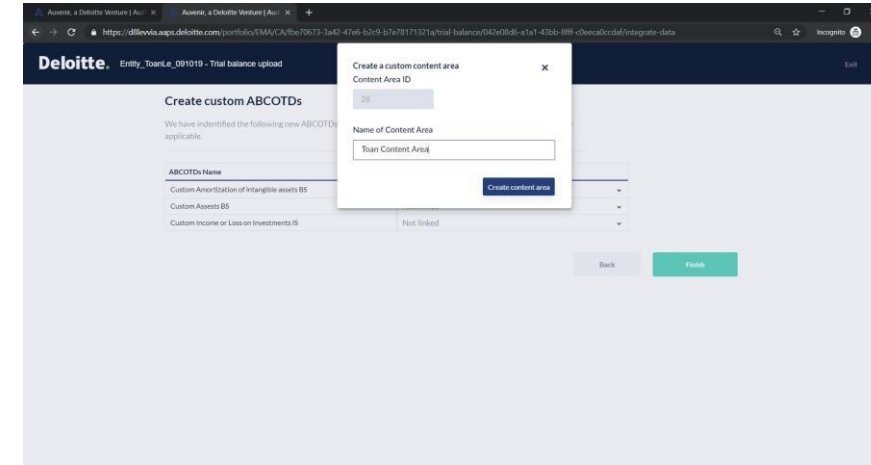

- Some time, some ABCOTD in mapping file don't map with any content area return from INK. In this case, **after finished for upload mapping** file user can **manually map the file** as beside image
- In this view, user can create new content area and map to the ABCOTD also
- User **can skip this step** and **pressing finished** without any issue

- Normally, the mapping will be **failed** when INK data **return new ABCOTD**. Please **check** and **update** the **ABCOTD** in mapping file and **upload again**

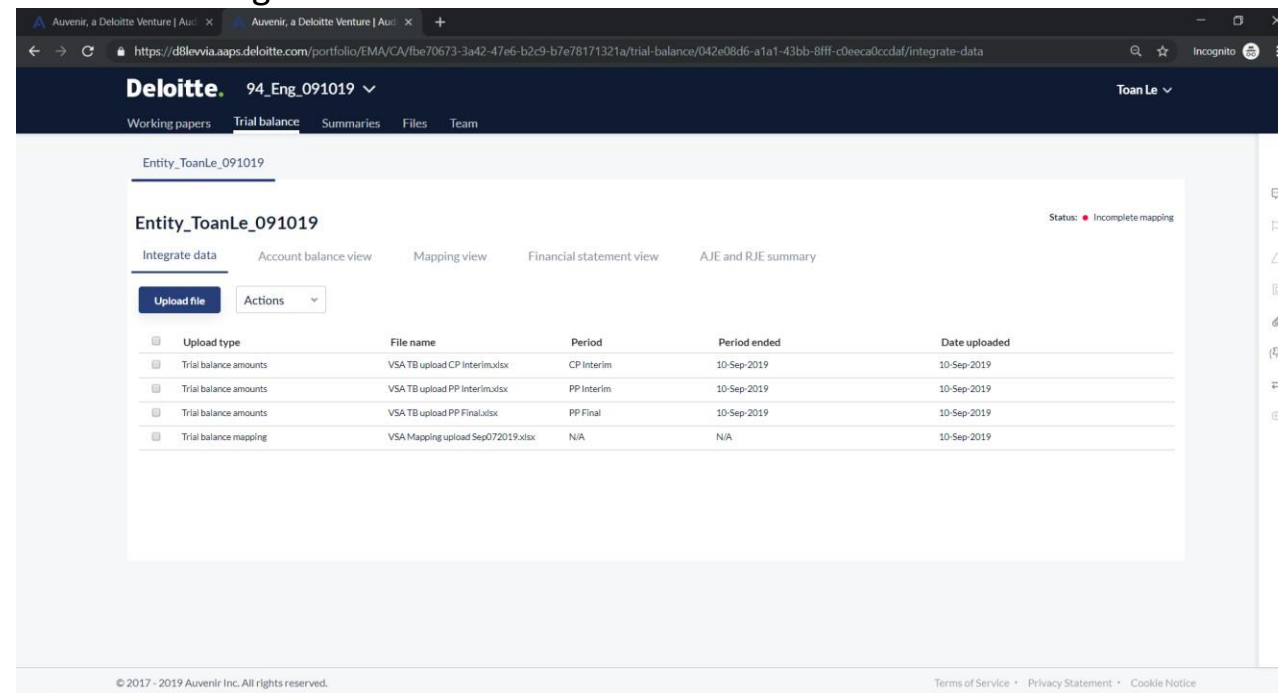

- During **uploading**, if there is any **issue**, the error will display and **allow** user to **download** the **file** and **correct** it

- Some time, some ABCOTD in mapping file don't map with any content area return from INK. In this case, after finished for upload mapping file user can manually map the file as beside image

- In this view, user can create new content and map to the ABCOTD also

- User can skip this step and pressing finished without any issue

area

- If there is any ABCOTD which is not map to the content area, the mapping indication will be mart as “Not completed”:
  - User can map it manually
  - User also manage the custom content area and custom ABCOTD by clicking on the button on Mapping View
  - Only **finished** for **all mapping** the mapping **status** will be updated to mapping **completed**
  - **Interim data view after finished** for **uploaded all interim** data

# PAR and Scoping

- Preliminary Analytical Procedures are required to be performed as part of risk assessment procedures to enhance understanding of the entity's business and the significant transactions and events that have occurred since the prior year end, as well as to identify areas that might represent risks (risks of material misstatement) relevant to the audit
- Scoping is the process of assessing whether ABCTODs are required for further risk assessment and testing procedures (further audit procedures being, tests of the operating effectiveness of controls and/or substantive procedures). It is done concurrently with preliminary analytical review (PAR) as some documentation/ data collected in PAR is used in scoping.
- After finished for Materiality and Trial balance upload, the next step will be Par&Scoping as below images

# Note:

- Make sure the materiality value and performance materiality is available on the page and second picture.
- The period end tab will be clocked because the final data is not uploaded
- First time when open the page, some column don't have any data.
- This columns will be calculated automatically base on the input threshold value and available materiality value base on the amount of the account

- In the par&scoping, user have to input the threshold value and threshold percent
- After inputting, the value will be calculated and updated automatically
- After calculating, only the “Material” account will be allowed to generate the risk assessment in the related content area
- If all account in one ABCOTD is “Not Material” in this step, the ABCOTD will be scope-out
- If all ABCOTD in the content area, the Content area will be scope-out and no Risk assessment will be generated for this content area
- User can update the scoping value manually and change the account/Fsline/ Node line manually from scoping to scope out or vice versa

# Risk Assessment (RA)

- After finished actions on Par&Scoping, on pressing “Save” a process will be call to generate risk assessment working paper for all scope-in content area
- During risk assessment, the user is selecting from various analytics, tailoring questions (TQs) to determine whether the RoMMs for the scoped in ABCoTDs exist, are remote, or are at any other level. Risk assessment requires a list of preliminary scoped in ABCoTDs, and their default RoMMs and risk levels. The objective is to determine which RoMMs are relevant and the relevant controls and procedures necessary to audit the ABCOTD (via auditing their relevant RoMMs). This process may be done for one ABCOTD at a time or for multiple grouped accounts at a time (remember the multi-select option when demoing some of the current EMS functionality...). Ultimately the solution needs to be able to do this by ABCoTD, by groupings of ABCoTDs, or business process (which is just another way to present a grouping of related ABCoTDs)

- After finished for saving Par&Scoping page, the risk assessment will be generated automatically as below image under planning subphase

The screenshot shows the Deloitte working papers interface. The top navigation bar includes the Deloitte logo, the user name 'Toan Le', and a dropdown menu. Below the navigation bar, there are tabs for 'Working papers', 'Trial balance', 'Summaries', 'Files', and 'Team'. The main content area is titled 'Working papers' and features a search bar and a 'Create new' button. A table lists various working papers, with columns for ID and name, Prepared by, Reviewed by, Review notes (Open, Cleared, Closed), Open flags, Files, and Comments. A yellow box highlights a group of documents under the '13300' category, including 'Cash and cash equivalents', 'Investments', 'Accounts Receivable', 'Other Receivables', 'Inventory', 'Prepaid expenses', 'Property, plant and equipment', and 'Investment Property'.

- Each Risk assessment working paper includes:
  - Tailoring questions
  - Defining/assigning RoMMs and risk levels
  - Selection of relevant controls that respond to the RoMM (note not every RoMM needs a control matched to it)
  - Substantive procedure selection to respond to the RoMMs (including whether the substantive procedure will be performed at interim)

# Tailoring question tab

- To enable other tab in Risk assessment working paper user should answer all question in the tailoring question Sometime question will depend on each other

This screenshot shows the 'Tailoring questions' tab selected in the left-hand navigation menu. The main content area displays five questions (AR.TQ1 to AR.TQ5) related to Accounts Receivable. Each question has two radio button options: 'Yes' and 'No'. The questions are:

- AR.TQ1: Do the underlying trade accounts receivables include credit balances that may be considered material?
- AR.TQ2: Do the underlying trade accounts receivables include balances that are denominated in a foreign currency that may be considered material?
- AR.TQ3: Does the entity have material past due trade accounts receivables and/or a material allowance for doubtful trade account receivables?
- AR.TQ4: Are there any significant management estimates in trade accounts receivable?
- AR.TQ5: Are there any material related party transactions in trade accounts receivable?

The bottom of the screen shows the footer with copyright information: © 2017 - 2019 Avenor Inc. All rights reserved.

This screenshot shows the same 'Tailoring questions' tab, but with the 'Yes' radio button selected for all five questions (AR.TQ1 to AR.TQ5). The left-hand navigation menu is also visible, showing the 'Accounts Receivable - Identify and assess ROMMs and plan further audit procedures' section.

The bottom of the screen shows the footer with copyright information: © 2017 - 2019 Avenor Inc. All rights reserved.

# ROMMs tab

- ROMMs tab: display all related risk to the content area and group by ABCOTD
- Risk classification include:
  - Lower
  - Significant
  - Higher
  - Remote: Remote risk will not available when generating working paper

The screenshot displays the 'ROMMs' (Risk Oriented Monitoring Mechanisms) tab within the Avenir system. The interface is titled '94\_Eng\_091019 - Accounts Receivable - Identify and assess ROMMs and plan further audit...'. The left sidebar shows a navigation menu with 'ROMMs' selected. The main content area is titled 'ROMMs' and includes a sub-header 'Review your ROMMs within each ABCOTD to confirm that the risk classifications are appropriate and that open flags are addressed.' Below this, a dropdown menu shows 'ABCOTD: Receivables'. The main table lists five ROMMs, each with an ID, Title, Assertion(s), Risk classification, and Reason for classification. All risk classifications are marked as 'Default' with a yellow triangle icon. The footer of the page includes copyright information: '© 2017 - 2019 Avenir Inc. All rights reserved.' and links to 'Terms of Service', 'Privacy Statement', and 'Cookie Notice'.

| ID    | Title                                                                                                                                                                                                          | Assertion(s)                                                                                    | Risk classification | Reason for classification |

| AR.R3 | Trade accounts receivable have been recorded which do not relate to the entity, do not exist and/or have been incorrectly recorded<br><small>No linked business process</small>                                | Rights and Obligations (B)<br>Valuation and Allocation (B)<br>Existence (B)                     | Default             | Default                   |
| AR.R4 | Trade Accounts Receivable denominated in foreign currency have been incorrectly translated.<br><small>No linked business process</small>                                                                       | Valuation and Allocation (B)                                                                    | Default             | Default                   |
| AR.R5 | Allowance for doubtful accounts is calculated using inappropriate methodology and/or is based on inaccurate receivables aging data<br><small>No linked business process</small>                                | Valuation and Allocation (B)                                                                    | Default             | Default                   |

- User can open any RISK details by clicking on any RISK row
- User can Edit the risk by “Edit” function on risk details
- When **editing** any **risk**, if there is any **significant** **changed**. **Description** of the change should be **input** for **tracking**
- **After** **Edit** **risk**, new information will be **saved** **immediately**

The screenshot displays the Deloitte ABCOTD (Accounts Based on Controls and Other Tools) interface for Accounts Receivable. The main view shows a table of ROMMs (Risk of Material Misstatement) with columns for ID, Title, Assertion(s), and Risk classification. The table lists five ROMMs (ARR1 to ARR5) related to trade accounts receivable, credit balances, and allowance for doubtful accounts. Each ROMM has a yellow warning icon in the Risk classification column.

On the right side, an "Edit standard ROMM" modal is open. It contains the following fields:

- Associated ABCOTD:** Receivables
- Risk ID:** ARR1
- Risk title:** Trade accounts receivable stated in the general ledger do not reconcile to the trade accounts receivable records and/or the reconciliation
- Risk description:** (Text area for description)
- Associated assertions:** (List of assertions: Completeness (B), Rights and Obligations (B), Existence (B), Valuation and Allocation (B))
- Due to fraud:** (Toggle switch)
- Risk classification:** Lower
- Reason for risk classification:** Default
- Risk classification rationale:** (Text area for rationale)

At the bottom of the modal, there are "Cancel" and "Save" buttons.

# Procedure tab

- Audit procedures are the processes and methods that auditors perform to obtain audit evidence which enables them to make a conclusion on the set audit objective and express their opinion.
- Procedure tab include below information:
  - All related RISK: All related RISK for the content area will display here
  - IF any RISK is remote, this will not display on below list for generation
  - Each risk will include the related procedure. User will select the related procedure for working paper generation
  - Procedure account mapping: After selecting the RISK and procedure, user has to map the selected procedure to the account
  - Generate working paper: Working paper will be generated on this tab

- User also Manage Procedure button
- All the related procedure will be display here
- User also can add new procedure and select it for working paper generation by create custom procedure tab

- Procedure account mapping:
  - For each selected procedure, user have to map with the account which he want to generate the working paper
  - Only after mapping the account, user will be able to generate the working paper
  - From this tab, user can select the procedure which is mapped to the account to generate working paper

- o All Account, table and all information have been selected, that why user can generate working paper without any issue ✓ Details explanation will be cover in working paper generation in next slides

# Working paper

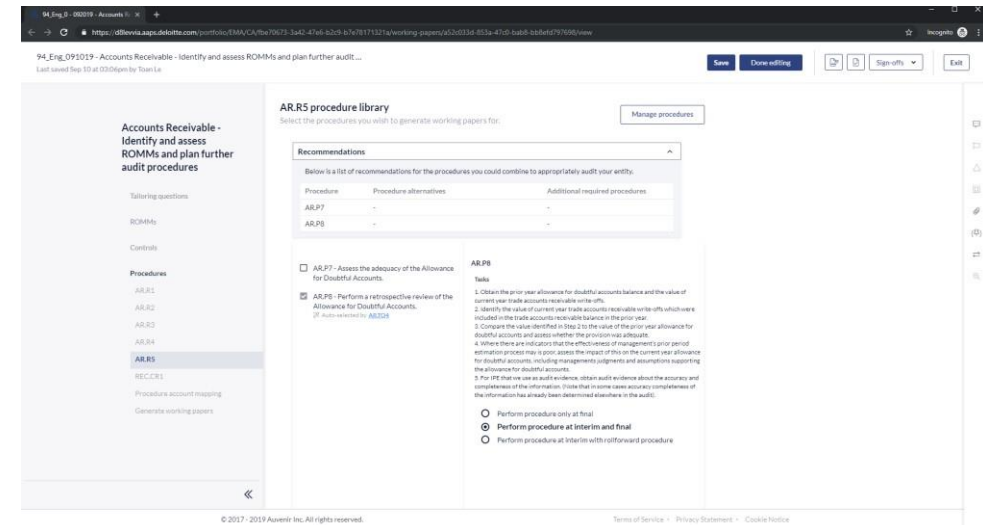

- Audit working papers are the documents which record all audit evidence obtained during financial statements auditing, internal management auditing, information systems auditing, and investigations. Audit working papers are used to support the audit work done in order to provide the assurance that the audit was performed in accordance with the relevant auditing standards

## Generate working paper from procedure

✓ As mentions above, user have to perform step:

- Update tailoring question
- Review ROMMs
- Select procedure coordinate with RISK o Mapping account o

And finally generate working paper

❑ Note:

- User have to select procedure and then select the working paper type that user want to generate o Currently we have some working paper type: Interim, Final, Roll Forward
- The Interim working paper is the interim working paper data. This working paper only include interim data on it o The Final working paper will include also the final data it it's available
- Roll forward data will be the roll forward data on it. User have to select the rollforward option incase use want to generate this type of working paper
- In-case the interim data is uploaded to the engagement, then the interim, final, and roll forward can be generated without any issue
- In-case final data is uploaded to the engagement, then only Final option can be selected for working paper generation o In-case the final data is uploaded after the interim + final is working paper is generated with the interim data then the interim working paper still use the interim data, and the final working paper is uploaded with the final data

After user select the procedure for working paper generation, user have to go to procedure account mapping tab to map the select procedure and then map with the account for generation.

The list account display related with the ABCOTD in the content area

The account which is not selected will not be generated in the related working paper.

After generation, if use want to add more account to the working paper user can select some more account and pressing “Save”. The account will be updated to the working paper

After mapping the account in previous steps, user can perform working paper generation by select the related procedure and the clicking on “Generate Working paper” button  
On finishing the working paper generation the UI should indicate that as below

After finishing for working paper generation, the working paper should display on working paper tab under the **Perform Phase** and **Substantive Testing** subphase

The screenshot shows the Deloitte working papers interface. The top navigation bar includes the Deloitte logo, the user name '14\_Eng\_0242PM', and a dropdown menu. Below the navigation bar, there are tabs for 'Working papers', 'Trial balance', 'Summaries', 'Files', and 'Team'. The main content area is titled 'Working papers' and includes a search bar and several action buttons: 'Create new', 'Filter', 'Collapse all', 'Expand all', 'Mark as prepared', 'Mark as reviewed', and 'Delete'. The table below lists working papers organized by procedure. A yellow box highlights the '26003 Substantive Testing - Payroll' section, which includes five sub-items: '26003.01 Payroll - Leadsheet', '26003.02 TOD - Payroll (PAY.P1.b) - Interim', '26003.03 Perform detail testing rollforward procedures. (RFWAR...', '26003.04 SAP - Payroll (PAY.P1.a) - Interim', and '26003.05 SAP - Payroll (PAY.P1.a) - Final'. Each row in the table has columns for 'ID and name', 'Prepared by', 'Reviewed by', 'Review notes' (with sub-columns 'Open', 'Cleared', 'Closed'), 'Open flags', 'Files', and 'Comments'.

| ID and name                                                       | Prepared by | Reviewed by | Review notes |         |        | Open flags | Files | Comments |

Procedure and working paper type mapping:

There are difference types of working paper, each working paper type is generated by a related procedure.

As beside image, user must select correct procedure to generate the expected working paper **Example:**

If user want to generate Barebone account for content area Receivable, the user have to select procedure AR.P8 in content area Account Receivable risk Or if user want to generate:

- TOD (Test of details): AP.P2.a, PPE.P2, PPE.P3,...
- Account BareBone: AR.P8, PPE.P9, ...
- SAP: AP.P7, PPE.P3, PPE.P7,...
- Judgemental: REV.P8.a, PPE.P5, PPE.P6,...
- Confirmation: AP.P10, AP.P2.a,...

- ➔ Please reference to the attached excel file and generate the working paper
- ➔ Each working paper type have difference UI with difference requirement for implementation.
- ➔ Some working paper as below slides. Details requirement can be found in confluence file
- ➔ Leadsheet: leadsheet working paper will also generated when user have generated working paper for any procedure in any content area. (this will be cover in another slides)

| Procedure code | Procedure name                    | Procedure description                                                                                                                                                                                                                                                                                                                                            | Working paper type     |

[Final](#)

# Final data workflow

- Final Data workflow: the flow only effect after CP final is uploaded to trial balance data

- o Case 1: Final data is uploaded during trial balance step. It's means that user create engagement, setup interim materiality and then upload CP final data into trial balance
- o Case 2: User upload the final data after completed for interim flow.

**Case 1: Upload all data before generate working paper.** It's means that user create engagement, setup interim materiality and then upload all data include CP interim, PP interim, PP final and the CP final data)

➤ All details steps should be same as above. But there is additional step as below:

1. During Trial balance step, user have to give decision if he want to user the same Materiality value on Interim or agree to update materiality with revise value.
2. Set up Materiality on Revise tab if user want to change the materiality value
3. Par&Scroping page: the Period end tab will be enabled. Now user have to work on this tab only
4. Risk Assessment: During step to select procedure, only Final option is available for selection to generate working paper
5. On Trial balance data, user can add AJE&RJE (journal entry) for reference
6. Leadsheet function will display final view after refreshing

## 1. On trial balance working paper, Revise materiality when upload CP final data

- When selecting “YES”, it’s mean that user does not want to update materiality value and keep the same materiality as planning
- When selecting “No” on this page user have to update the materiality value on Revise tab. The new materiality value will be used for all other action. Planning materiality will not be used any more

The screenshot shows a web browser window with the Deloitte logo and the title 'Entity\_ToanLe\_091719 - Trial balance upload'. The main heading is 'Assess materiality'. Below it, a sub-heading reads: 'Determine if the materiality determined during planning remains appropriate. You will be able to change your decision in the materiality working paper.' The question is 'Does the materiality determined during planning remain appropriate?'. There are two radio button options: 'Yes (As of 9/17/19)' which is selected, and 'No'. A tip box below the options states: 'Tip: By selecting "No", the Revised Materiality tab in the Materiality working paper will be unlocked.' At the bottom, there are two buttons: 'Back' and 'Finish'.

Deloitte. Entity\_ToanLe\_091719 - Trial balance upload Exit

### Assess materiality

Determine if the materiality determined during planning remains appropriate. You will be able to change your decision in the materiality working paper.

Does the materiality determined during planning remain appropriate?

☒ Yes (As of 9/17/19)

☐ No

Tip: By selecting "No", the Revised Materiality tab in the Materiality working paper will be unlocked.

Back Finish

## 2. Materiality view when selecting “No”, Revise materiality should be updated.

- User also have to set the Materiality, Performance materiality, CTT on this tab.
- This materiality values will be used for all action in the working paper

- Risk Assessment: perform step same as above. But when trying to generate working paper the interim working paper is disabled as below:

The screenshot shows the 'PAY.R2 procedure library' in the Avenir audit software. The left sidebar has a 'Procedures' section with 'PAY.R2' selected. The main area displays a list of recommendations for procedures to combine for auditing. Below this, there are two columns: 'Procedures' and 'Tasks'. The 'Procedures' column lists 'PAY.P2.a - Perform a substantive analytical procedure on bonus expenses' and 'PAY.P2.b - Perform a Test of Details on bonus expenses'. The 'Tasks' column lists tasks for 'PAY.P2.b', including obtaining management approval, reconciling bonus payments, investigating unrecorded amounts, determining the population, selecting a sample, testing each selection, and determining the accuracy of the calculation. The 'Generate working papers' button is disabled.

The screenshot shows the 'Generate working papers' step in the Avenir audit software. The left sidebar has 'Generate working papers' selected. The main area displays a table of procedures to be generated. The table has columns for 'ID and period', 'Procedure description', 'ROMMs', 'Related procedure', '# of accounts', and 'Generated WP'. The table is divided into two sections: 'Testing approach: Interim with rollover procedures' and 'Testing approach: Interim and final'. The 'Testing approach: Interim with rollover procedures' section shows two rows of procedures, both with a green checkmark in the 'Generated WP' column. The 'Testing approach: Interim and final' section shows two rows of procedures, both with a red 'X' in the 'Generated WP' column. The 'Generate working papers' button is disabled.

- Working paper: working paper generation steps should be same as above.
- All data final will be uploaded to the account table if available

## **Case 2: User upload the final data after completed working paper generation for interim flow.**

- In this case, user already complete the flow and working paper is generated. Now user upload CP final data and working on this CP final data. Function will be kept as interim function with below update:
  - Materiality value should be revised (same steps as above )
  - Par&Scroping: Final tab will be activated. (same steps as above)
  - The generated interim working paper from interim tab will be kept as before
  - The generated final working paper will be updated with new final account on refresh
  - New working paper generation only available with Final option (same as above)
  - Leadsheet will be updated with final data

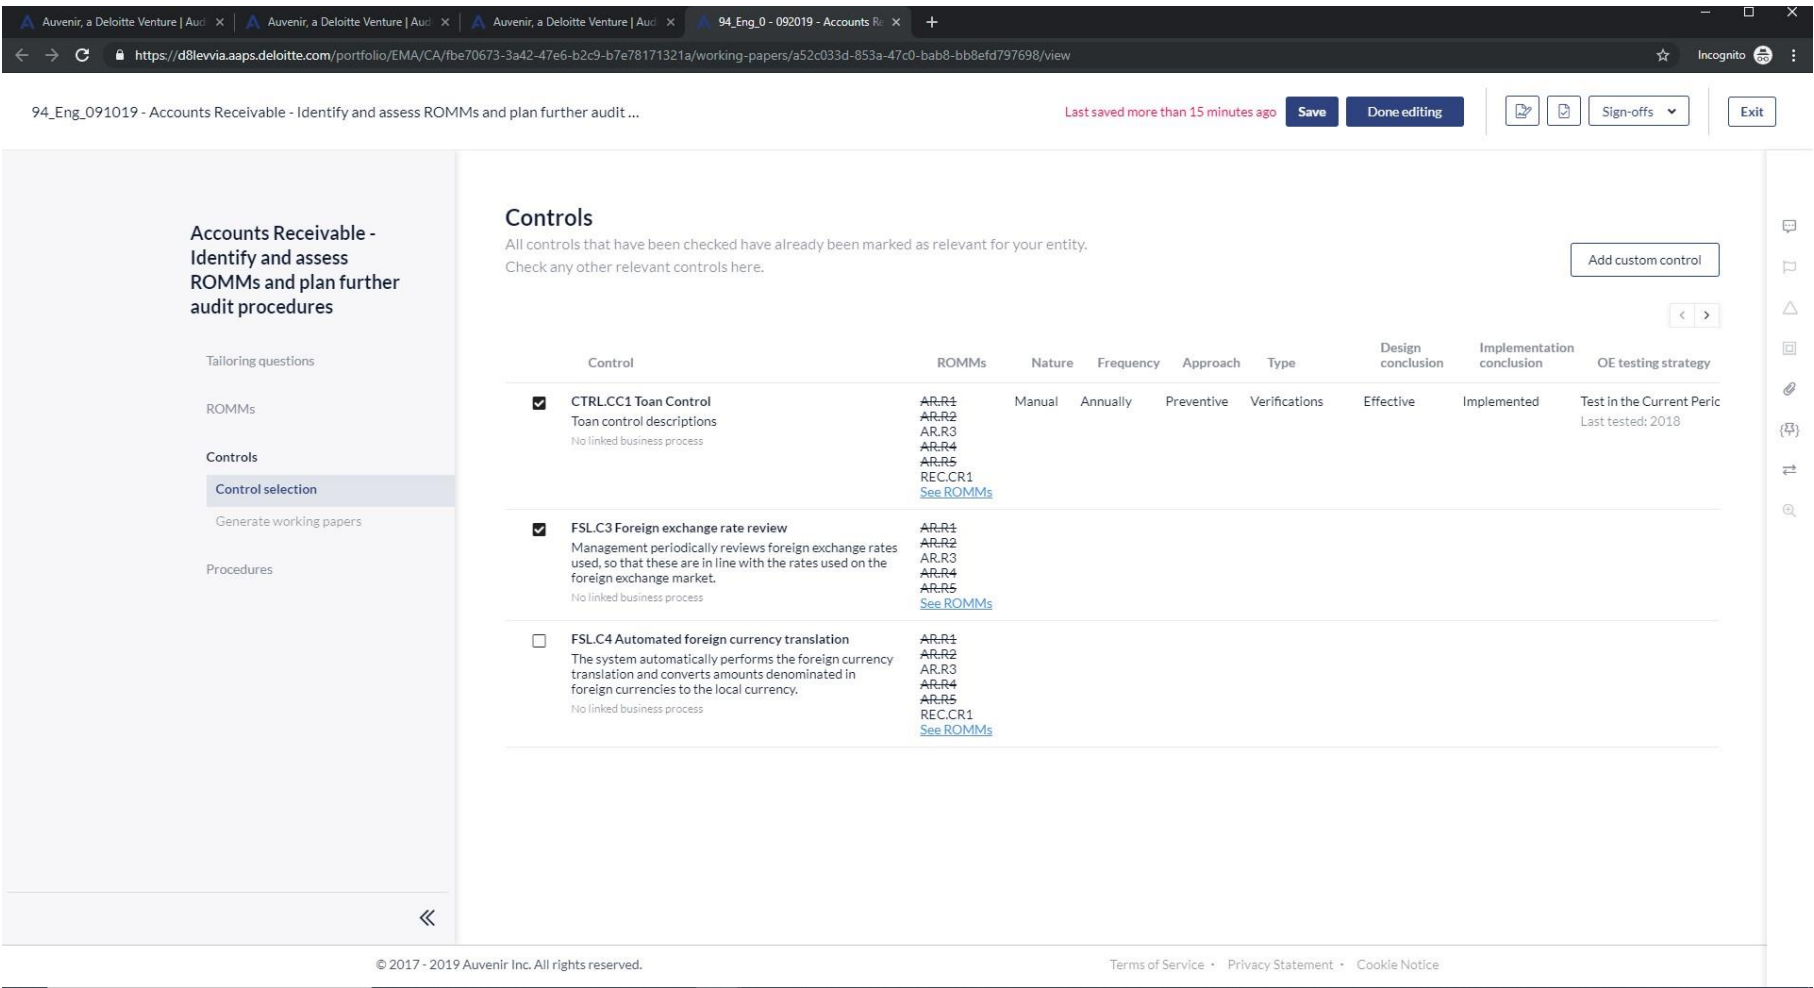

# Generate other working paper type

*(Control testing working paper and barebone working paper)*

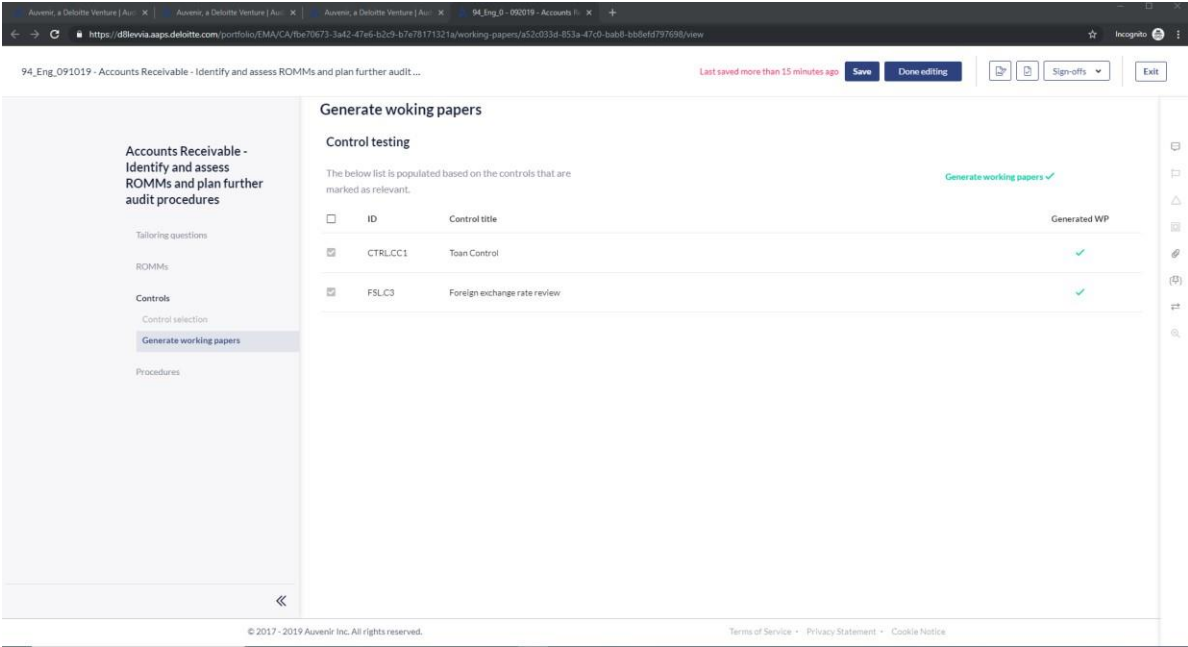

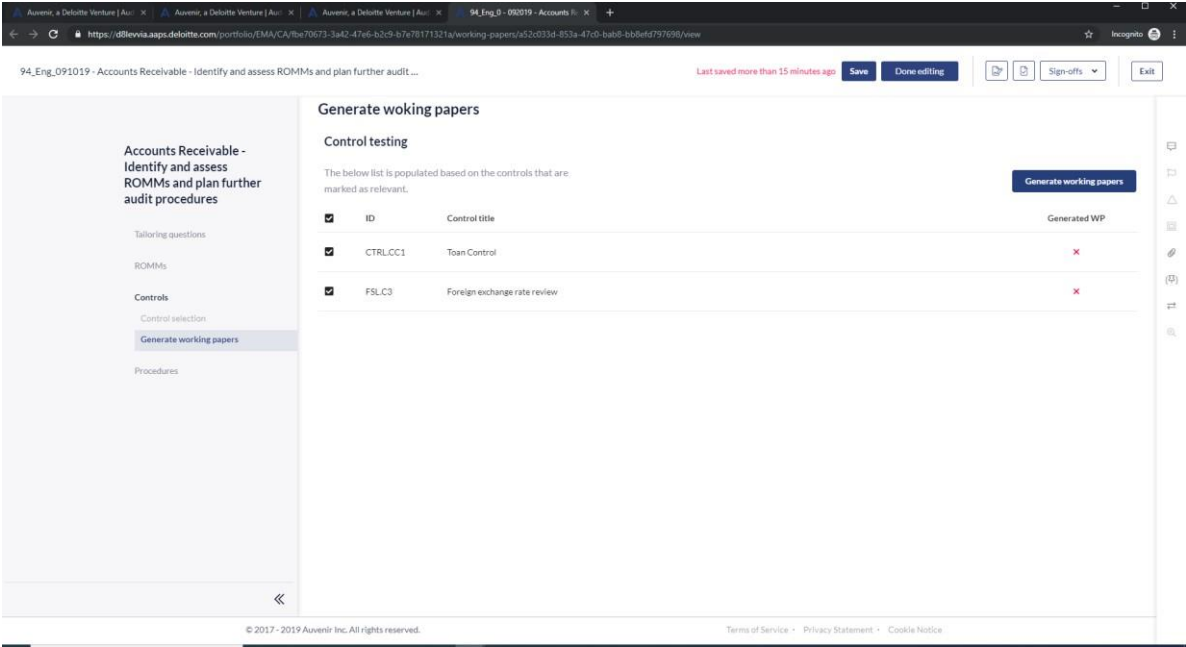

# Control testing working paper

This is also a working paper that is generated from the control with below step:

User select the control form control selection as below image:

On next tab Generate working paper, user can generate the working paper as below

After generation, control testing working paper will be generated as below image on working paper tab:

Control testing working paper should display as below

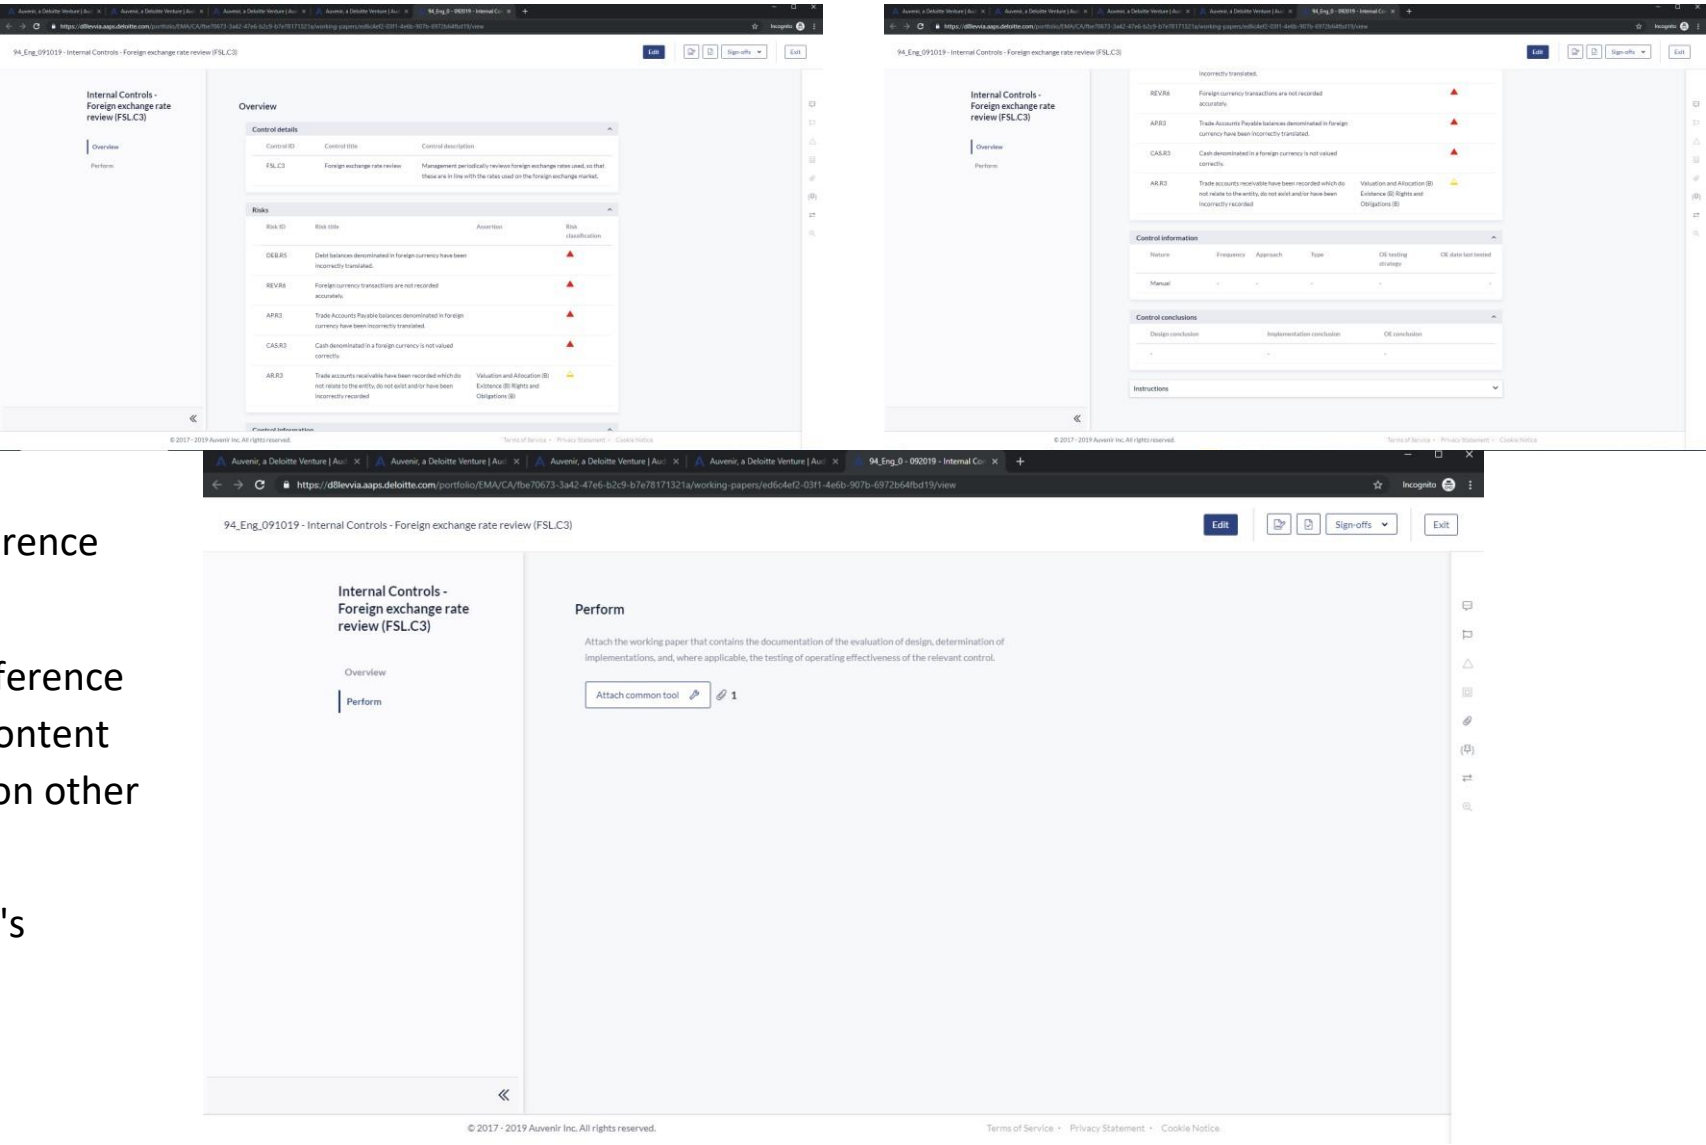

There is one attachment always available after generated. It call embedded template

The attachment can be download or edit directly on and save to the server.

Control testing is the same for difference data upload

If the control which is belong to difference content area is generated on one content area, then it will not be generated on other content areas

Refer to confluence for more detail's requirement

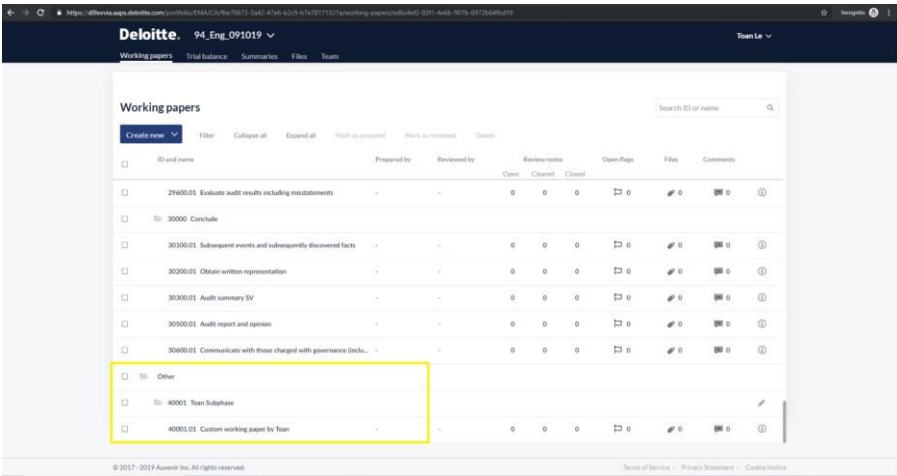

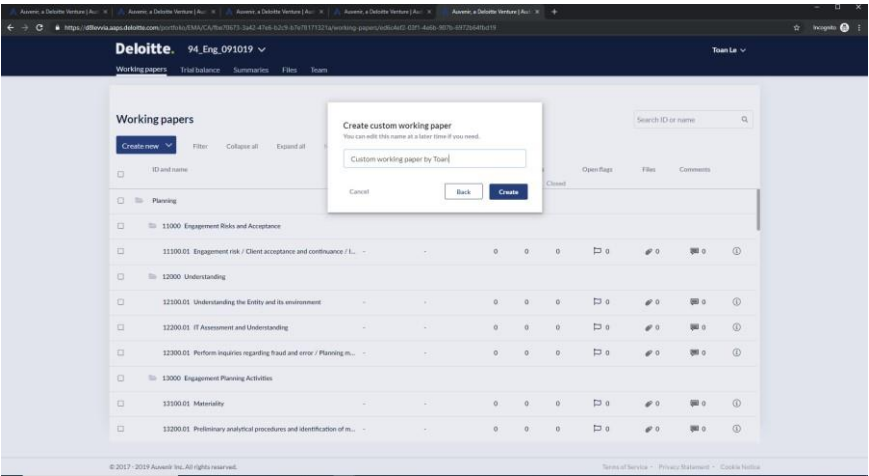

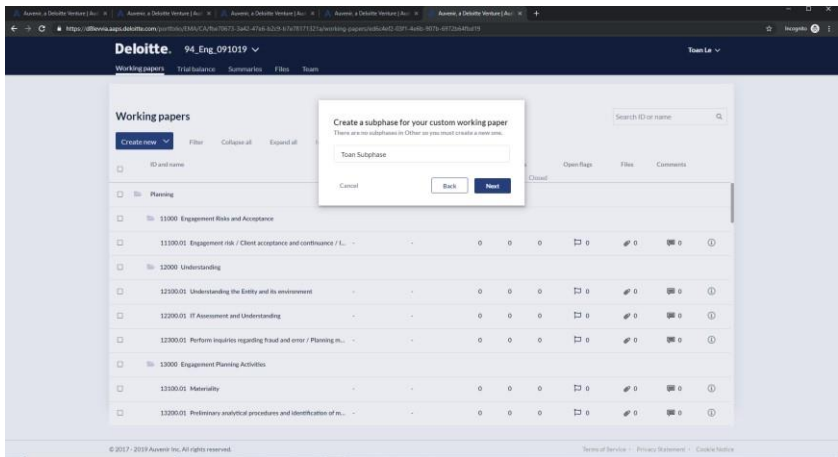

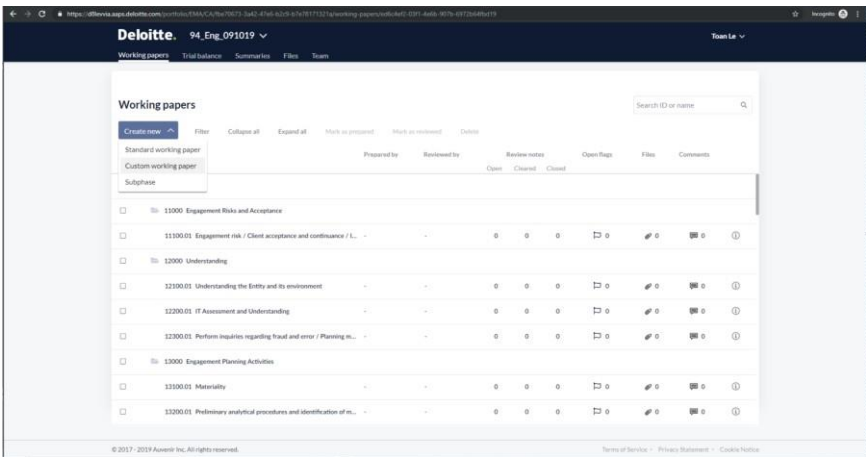

# Non-Account working paper

## (Non account barebone)

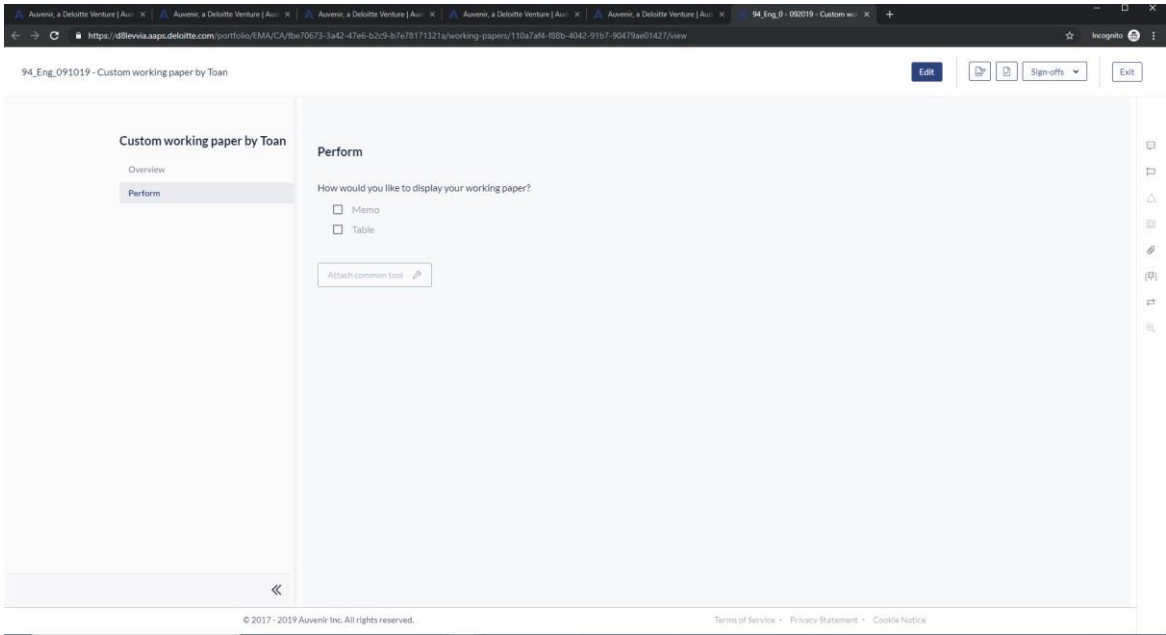

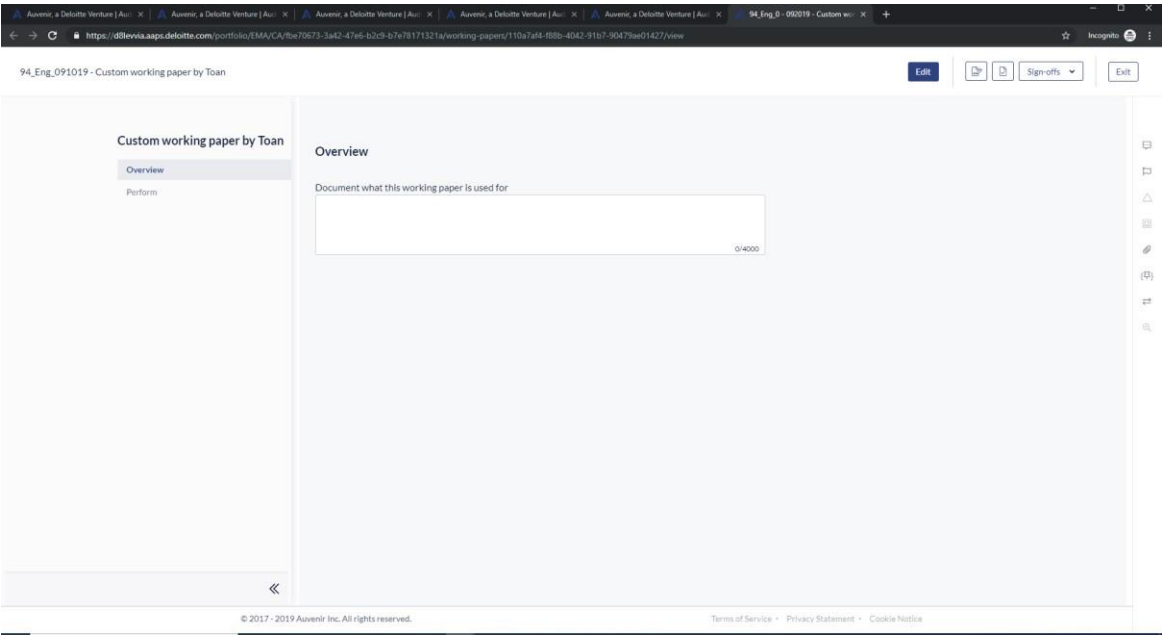

The working paper also called custom working paper

The same template when user is generated with below steps

Only can generate this working paper under Phase Perform or Other

The working paper include two tab as below:

# Lead sheet Working paper

- Leadsheets / Account area dashboards show information from sections in the audit file that relate to a content area. A content area is composed of 1 or more ABCOTDs. This gives the practitioner an overview of relevant information from all important sections of the audit file that relate to the content area
- There are no fields in this dashboard that practitioners can input data to or attach files. All information on this page is linked to some other sections in this audit file. This overview will act as an overall summary of work performed on the content area throughout the audit

## **Lead Sheet Generation:**

- Leadsheet can be generated when user generate any procedure working paper
- Note:
  - Leadsheet can only be generated onetime. If any content area perform generate working paper for any procedure, then the leadsheet will be generated automatically
  - Each content area only have one leadsheet
  - Each leadsheet will summarize status for the account in the content area only
  - Leadsheet can be view only
  - Incase user update anything on Trial balance, Materiality, Par&Scropeing or Risk Assessment, the leadsheet will be effect

- Interim Leadsheet and Final Leadsheet: each type of leadsheet show difference view as below.
- Only after uploading CP final data, the final view will be displayed

### Understanding the Entity & its Environment (UEE)

#### Ink Input:

1. Content (Questions, guidance, widgets, etc.)
2. Activations
3. Business Process Taxonomy
4. Business Process Documentation Taxonomy

#### Input:

1. Entity name

#### Functionalities:

1. Fill in UEE questions
2. Select relevant Business processes
3. Define custom Business processes
4. Define whether there are any related parties transactions
5. Define whether there are foreign currency transactions
6. Define whether there are any significant accounting estimates

#### Output:

1. List of Business Processes selected for Understanding Business Process feature.
2. Defined custom Business processes.
3. Indication whether there are any related parties transactions.
4. Indication whether there are foreign currency transactions.

## Understanding the Business Processes (BP)

### Ink Input:

- 1. Content (Questions, guidance, widgets, etc.)
- 2. Flowchart templates
- 3. Business Process Taxonomy
- 4. Business Process Documentation Taxonomy
- 5. Activations
- 6. ABCOTD-BP Association

### Input:

- 1. List of Business Processes from Understanding the Entity
- 2. Uploaded Flowcharts (files page)

### Functionalities:

- 1. Select Flowchart or Narrative
- 2. Answer the narrative questions
- 3. Upload flowchart from local or Files page
- 4. Link ABCOTD to Business process

**How to generate Business Process WP**

**Steps:**

- 1. Created Engagement with Financial Statement Audit type
- 2. Go to Working papers tab > Expand "Planning" folder > Expand "Understanding" folder
- 3. Click on "Understanding the Entity and its environment" to open UEE working paper setting page
- 4. Navigate to "Understanding of transactions, processes and control activities" left side menu

5.1 To create standard BP:

5.1.1 Click on checkbox to select one or some standard BP types with form Flowchart (default) or Narrative

5.2 To create custom BP:

- 5.2.1 Click on "Add a new business process" button
- 5.2.2 Name the custom business process (Ex: "abc") > Click "Done"
- 5.2.3 Click on checkbox to select the custom BP type with form Flowchart (default) or Narrative

## Materiality

### Ink Input:

1. Content (Questions, guidance, widgets and etc.)
2. Benchmarks taxonomy and benchmark factors
3. ABCOTDs taxonomy

### Input:

1. Corresponding Materiality tab is activated based on the TB period stored in the system.
2. User decision whether Planning materiality is appropriate to be used as final (this indication is used as input and output as the user can change it in this feature and the change will apply to all features).
3. Custom ABCOTDs

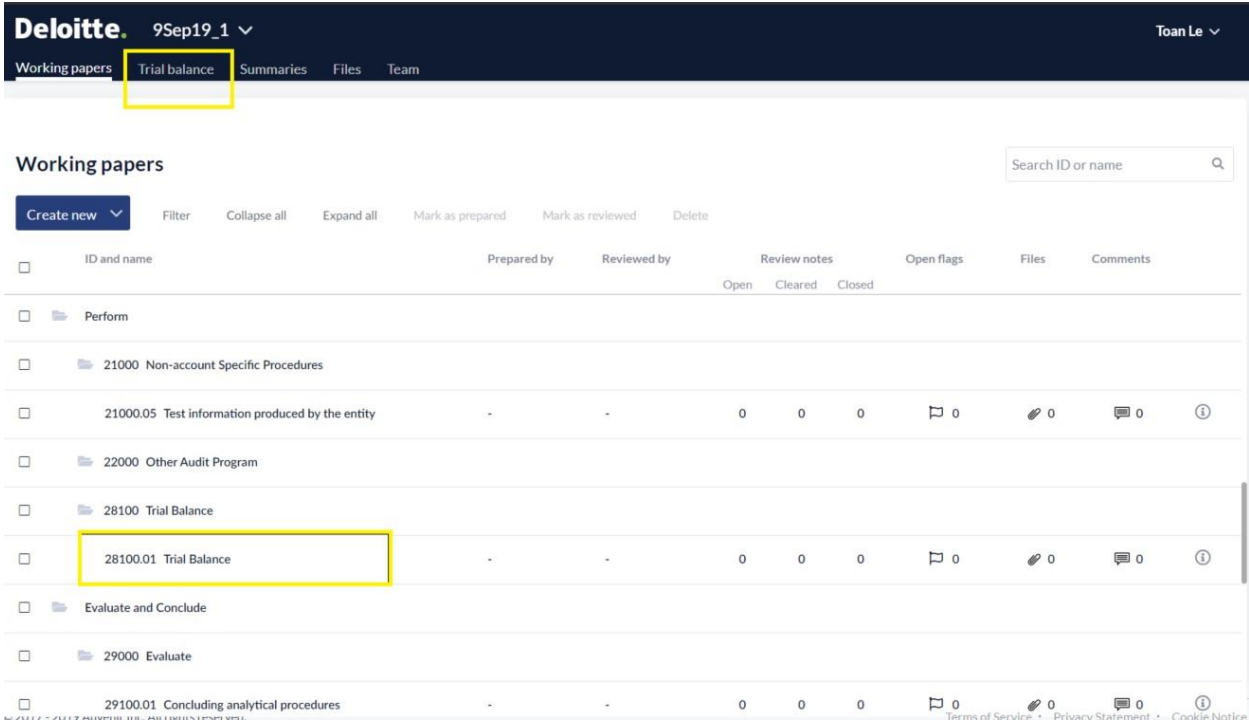

### Functionalities:

1. Answer materiality questions
2. Set Planning overall materiality
3. Set Planning PM
4. Set Planning CTT
5. Set Planning ABCOTD materiality
6. Set Planning ABCOTD PM
7. Set Period end overall materiality
8. Set Period end PM
9. Set Period end CTT
10. Set Period end ABCOTD materiality
11. Set Period end ABCOTD PM
12. Decide whether planning materiality is appropriate to be used as final

### Output:

1. Planning overall materiality
2. Planning PM
3. Planning CTT
4. Planning ABCOTD materiality
5. Planning ABCOTD PM
6. Period end overall materiality
7. Period end PM
8. Period end CTT
9. Period end ABCOTD materiality
10. Period end ABCOTD PM
11. User decision whether Planning materiality is appropriate to be used as final (this indication is used as input and output as the user can change it in this feature and the change will apply to all features)

# TB (Trial balance)

## Trial Balance (TB)

### Ink Input:

1. Content areas taxonomy
2. ABCOTD taxonomy
3. CA-ABCOTD associationABCOTD type

### Input:

1. User decision whether Planning materiality is appropriate to be used as final (this indication is used as input and output as the user can change it in this feature and the change will apply to all features)

### Functionalities:

1. Upload PP interim
2. Upload PP final
3. Upload CP interim
4. Upload CP final
5. Upload TB mapping
6. Download upload TB files
7. Download PP interim
8. Download PP final
9. Download CP interim
10. Download CP final
11. Download TB mapping
12. Download Financial statements (BS/IS)
13. Create custom ABCOTDs
14. Create custom Content area
15. Map custom ABCOTD to Content area
16. Create adjustment
17. Create reclassification
18. Edit existing adjustment
19. Edit existing reclassification
20. Delete existing adjustment
21. Delete existing reclassification
22. Download all adjustments

### Output:

1. PP interim balance
2. PP final balance
3. CP interim balance
4. CP final balance
5. CP final + adjustments
6. CP final + adjustments + reclassifications
7. TB mapping
8. Adjustments

### Risk assessment (RA)

Ink Input:

1. ABCOTDs taxonomy
2. Content areas taxonomy
3. ABCOTD - Content area association
4. Tailoring question code
5. Tailoring question content
6. Tailoring question responses
7. Tailoring question activations/relations
8. ABCOTD - TQ association
9. Standard risk code
10. Standard risk title
11. Standard risk default level
12. Standard risk - ABCOTD association
13. Standard risk "due to fraud" indication
14. Risk assertions taxonomy
15. Standard control code
16. Standard control title
17. Risk-control association
18. Subs. procedure code
19. Subs. procedure title
20. Subs. procedure description
21. Subs. procedure tasks
22. Risk - Sub. Procedure association
23. RLF procedure code
24. RLF procedure title
25. RLF procedure description
26. RLF procedure tasks
27. RLF Procedure - ABCOTD association
28. Content (guidance, widgets, etc.)

Input:

1. Custom risk code (risk common tool)
2. Custom risk title (risk common tool)
3. Custom risk description (risk common tool)
4. Custom risk - ABCOTD association (risk common tool)
5. Risk current level
6. Explanation to risk level
7. Risk "due to fraud" indication
8. Risk links in the engagement
9. Custom control code
10. Custom control title
11. Custom control description
12. Control - Risk association
13. Control relevancy
14. Control nature
15. Control testing strategy
16. Control design conclusion
17. Control implementation conclusion
18. Control OE conclusion
19. Control approach
20. Control type
21. Control frequency
22. Selected procedures
23. Selected Risks
24. Selected controls
25. Risk flag code
26. Risk flag description
27. Risk flag resolution

### Functionalities:

1. Answer tailoring questions
2. Select relevant controls
3. Generate control testing WP
4. Create custom procedures
5. Select Subs. procedures for risk
6. Select testing approach
7. Select RLF procedures
8. Generate Subs. and RLF WPs
9. Map TB accounts to selected procedure

**Output:**

1. Remote risks based on TQ answer
2. Selected Subs. procedures
3. Testing approach
4. Selected RLF procedures
5. Relevant controls
6. Generated control testing WPs
7. Generated Subs. WPs
8. Generated RLF WPs
9. List of TB accounts mapped to selected procedure
